Executive Summary

This report provides a follow up study to the City of West Miami Engineering Traffic Study prepared by Marlin Engineering, Inc. in June of 2004. The study identifies projected traffic impacts resulting from the construction of seven (7) commercial developments within the City of West Miami and the City's concerns of cut-through traffic along eight (8) residential streets. The study area is primarily residential with some multifamily uses and commercial uses along SW 8th Street and along the southern portion of SW 67th Avenue. The purpose of this analysis is to analyze possible mitigation measures to slow down and reduce non-local traffic volumes. The scope and parameters of this study have been developed in consultation with the City of West Miami and the procedures follow the Miami-Dade County Traffic Flow Modification(s)/Street Closure Procedure, Revised January 2009.

Based on the previous 2004 study, 23 intersections were recommended for traffic calming devices; 19 roundabouts and five locations with other types of traffic calming devices. The devices were constructed to deter drivers from speeding and to provide safer streets for all users. After comparing the occurrence of crashes before and after the traffic circles were constructed, reported crashes for more than half of the the locations were reduced. The traffic circles were significant in improving safety on the residential streets. As a follow up to the original study, this report investigates the effectiveness that additional traffic calming devices will have had on reducing speeds, cut-through traffic and crashes.

Manual turning movement counts were performed at 8 intersections during the weekday morning and evening peak hours on Tuesday, May 15th, 2019. Additionally, 24-hour count data and speed data were collected during the same time period on 51 road segments within the project area. To further identify the need for safety improvements, crash occurrences within the project area was investigated over a 3-year period from 2016 to 2018.

New trips projected to be generated from seven (7) proposed developments in the study area were distributed to the existing network based on the distribution patterns outlined in the approved traffic studies that were provided to the City for each development. The trips were added to the 2019 existing traffic volumes to determine the 2019 background traffic volumes. An annual growth rate of 0.5% was added to the 2019 background peak hour traffic to determine the future 2024 traffic.

The arterial levels of service (LOS) was evaluated along the six (6) arterials within the project area for the existing and future conditions to compare projected changes between the 2004 Traffic Impact Study.

Criteria pertaining to the effectiveness of traffic calming measures was investigated for the unsignalized residential intersections within the project area. The criteria included an assessment of excessive daily and peak hour traffic volume, speeding, the occurrence of cut-through traffic and the occurrence of crashes per year. The impacts of these occurrences on the intersections were gauged to identify opportunities to implement traffic safety calming measures. Based on a scoring system, the intersections were sorted and prioritized highest to lowest. Of the 51 intersections studied, 10 locations are recommended for traffic calming treatments to improve safety.

Introduction

Purpose

The intention of this report is to provide a follow up study to the City of West Miami Engineering Traffic Study prepared by Marlin Engineering, Inc. in June of 2004. The study's focus was to identify traffic impacts projected to occur as a result of the construction of seven (7) commercial developments within the project area. Concerns of cut-through traffic along SW 11th Street, Sylvania Blvd, SW 23rd Street, SW 22nd Street, SW 66th Avenue, SW 64th Avenue, SW 9th Terrace, and SW 20nd Street all residential streets, have been expressed by the City of West Miami and local area residents. Within this area, the neighborhood is primarily comprised of residential homes, with some multifamily uses and commercial uses along SW 8th Street and along the southern portion of SW 67th Avenue. Refer to **Figure 1** for the study area.

The purpose of this study is to provide an evaluation of the effectiveness of the traffic circles that were recommended from the 2004 study and installed approximately ten (10) years ago. This study will also investigate the occurrence of non-local traffic utilizing several residential streets as a cut-through and analyze possible mitigation measures to slow down and reduce non-local traffic volumes. The scope and parameters of this study have been developed in consultation with the City of West Miami and the procedures follow the Miami-Dade County Traffic Flow Modification(s)/Street Closure Procedure, Revised January 2009.

To identify and address the potential transportation impacts of this project, the following tasks were undertaken:

- Obtained field data on the existing transportation system. Data collection included information on intersection spacing, roadway geometrics, sight distances, speed limits, pavement conditions, traffic controls, and pavement striping and signing.
- Conducted weekday morning and evening peak hour traffic turning movement counts to establish 2019 existing traffic and pedestrian volumes at eight (8) locations.
- Performed 24-hour tube counts within the project area to determine the hourly traffic volumes and 85th percentile speeds.
- Evaluated the peak hour traffic operation at the intersections listed above for the Existing 2019 condition.
- Identified crashes throughout the project area as reported by Signal Four Analytics for a period of three (3) years.
- Identified strategies to improve the safety throughout the project area where crashes were prevalent and 85th percentile speeds were greater than 5 mph above the posted speed limit.
- Research and report other mitigation measures.

TY·LININTERNATIONAL

CITY OF WEST MIAMI TRAFFIC CALMING STUDY

Study Area

Figure 1

- Evaluated the impacts of each scenario and provide recommendations to improve safety and reduce cut-through traffic on SW 11th Street, Sylvania Blvd, SW 23rd Street, SW 22nd Street, SW 66th Avenue, SW 64th Avenue, SW 9th Terrace, and SW 20nd Street.

Background

Based on the study completed in 2004, several intersections were recommended for traffic calming devices. Roundabouts were recommended for 19 locations and five (5) locations were recommended for other traffic calming devices. To date, a majority of the roundabouts and all of the traffic calming devices have been constructed. The traffic calming devices were put in place to deter drivers from speeding and to provide a safer street for all users. As a follow-up to the original study, this report investigated the effectiveness the traffic calming devices have had on reducing speeds and crashes within the project area.

Existing Traffic Conditions

Roadway Characteristics

Transportation Network Study Area

The following is a description of the major roadways within the study area. Refer to **Figure 2** for the existing roadway system.

SW 67th Avenue

SW 67th Avenue traverses north-south and is classified as an urban minor arterial street by Miami-Dade. Within the study area, SW 67th Avenue consists of two travel lanes in each direction with a two-way center left-turn lane. The 2010 Average Daily Traffic volume (ADT) south of SW 16th Street was approximately 30,000 vehicles per day. During the same time period, the Average Daily Traffic volume (ADT) north of SW 16th Street was approximately 31,000 vehicles per day. The posted speed limit on this segment of SW 67th Avenue is 35 mph.

SW 24th Street (Coral Way)

SW 24th Street traverse's east-west and is classified as an urban minor arterial street by Miami-Dade. Within the study area, SW 24th Street consists of two travel lanes in each direction with a center raised median and left-turn lanes at each intersection. The Average Daily Traffic volume (ADT) from 2010 as provided by FDOT for SW 24th Street just east of SW 67th Avenue was 28,000 vehicles per day. The posted speed limit is 40 mph.

SW 57th Avenue (South Red Road)

SW 57th Avenue traverses north-south and is classified as an urban minor arterial street by Miami-Dade. North of SW 10th Street, SW 57th Avenue consists of two travel lanes in each direction. South of SW 10th Street to SW 14th Street, SW 57th Avenue is comprised of two southbound travel lanes and one northbound travel lane. South of SW 14th Street, SW 57th Avenue is comprised of one travel lane in each direction. The 2010 Average Daily Traffic volume (ADT) north of SW 16th Street was approximately 20,000 vehicles per day. Bicycle lanes are provided along both sides of the street. The posted speed limit is 35 mph.

SW 8th Street

SW 8th Street traverses east-west and is classified as an urban principal arterial street by Miami-Dade. Within the study area, SW 24th Street consists of two travel lanes in each direction with a two-way center left-turn lane. The 2010 Average Daily Traffic volume (ADT) north of SW 16th Street was approximately 20,000 vehicles per day. The posted speed limit is 35 mph.

SW 62nd Avenue

SW 62nd Avenue traverses north-south and is classified as an urban major collector street by Miami-Dade. Within the study area, SW 62nd Avenue consists of one travel lane in each direction.

The 2010 Average Daily Traffic volume (ADT) south of SW 16th Street was approximately 7,500 vehicles per day. During the same time period, the Average Daily Traffic volume (ADT) north of SW 16th Street was approximately 6,600 vehicles per day. The posted speed limit is 30 mph.

SW 16th Street

SW 16th Street traverses east-west and is classified as an urban major collector street by Miami-Dade. Within the study area, SW 62nd Avenue consists of one travel lanes in each direction. The 2010 Average Daily Traffic volume (ADT) west of SW 62nd Avenue was approximately 13,000 vehicles per day. During the same time period, the Average Daily Traffic volume (ADT) east of SW 62nd Avenue was approximately 12,000 vehicles per day. The posted speed limit is 30 mph.

Land Use

The land use within the project area is primarily comprised of single family homes with a mixture of residential apartments, commercial/office land uses along SW 8th Street, SW 67th Avenue and SW 57th Avenue. In general, the land use composition is consistent with the land use blend identified in the previous study. Refer to **Figure 3** for the Existing Land Use Map.

Public Transit

Transit services provided by the City within the project area include bus and shuttle services. Refer to **Figure 4** for the Transit Service map identifying the bus stops, bus routes and the West Miami Shuttle Route.

Data Collection

Turning Movement Counts (TMC) Volumes

Manual turning movement counts were performed for T.Y. Lin International (TYLI) on Tuesday, May 15th, 2019 at the following intersections:

- o SW 8th Street at SW 67th Avenue
- o SW 8th Street at SW 62nd Avenue
- o SW 8th Street at SW 57th Avenue
- o SW 67th Avenue at SW 10th Street
- o SW 67th Avenue at SW 16th Street
- o SW 67th Avenue at Coral Way-SW 24th Street
- o SW 16th Street at SW 57th Avenue
- o SW 16th Street at SW 62nd Avenue

Traffic counts performed above were taken during the following peak periods:

- Weekday Morning peak period 6:00 AM to 9:00 AM
- Weekday Evening peak period 3:00 PM to 6:00 PM

Refer to **Appendix 'A'** for the 2019 AM and PM peak hour turning movement count sheets.

24-Hour Traffic Volume Counts

Machine tube counts were performed for T.Y. Lin International (TYLI) on Wednesday, May 15th, 2019 and Wednesday, May 22nd, 2019 on forty-five (45) local residential street segments and on six (6) arterial segments within the project area. Counts were taken in each direction across all travel lanes. The data sheets for each tube count location are included in **Appendix 'A'**.

Speed Data

During the same time period 24-hour traffic volumes were collected, directional speed data was also captured for the 45 local residential street segments and six (6) arterial segments. The segments with 85th percentile speeds greater than five (5) miles per hour over the posted speed limit were highlighted for the traffic calming analysis. Data sheets for each speed count location are included in **Appendix 'A'**.

Figure 5 identifies the tube count and turning movement locations and includes results of the 24-hour volume and speed studies.

During the data collection period, the traffic volume data and speed data for two segments were not captured as the roads were closed due to construction. Data collection on SW 23rd Street between SW 67th Avenue and SW 65th Avenue was impacted by the construction of District West Gables and the data collection on SW 9th Street between SW 65th Avenue and 62nd Avenue was impacted by the construction of Soleste I and II. Follow up counts will be scheduled for both locations after the construction projects are complete.

Observations

Favored as cut-through routes for local commuters during peak hour times, the following street segments were identified by the City of West Miami for further investigation:

- SW 11th Street from SW 57th Avenue to SW 62nd Avenue
- Sylvania Blvd from SW 8th Street to SW 57th Avenue
- SW 23rd Street from SW 63th Avenue to SW 67th Avenue

- SW 22nd Street from SW 57th Avenue to SW 67th Avenue
- SW 66th Avenue from SW 10th Street to SW 8th Street
- SW 64th Avenue from SW 8th Street to SW 24th Street
- SW 9th Terr from SW 57th Avenue to SW 58th Avenue
- SW 20nd Street from SW 62nd Avenue to SW 67th Avenue

These local cut-through streets are popular with local commuters as they provide a direct connection between the arterials with minimal congestion and fewer controlled stops.

Crash Analysis

A crash analysis was performed by TYLI for the project area to identify any collision patterns. The investigation showed that there were several severe crashes involving high speeds. A majority of the crashes occur on arterials and were concentrated at intersections. Within the study area, a total of 597 crashes occurred between 2016 and 2018. While there were no fatalities, 64 crashes involved injuries, six (6) crashes involved pedestrians and three (3) crashes involved pedestrians.

Refer to **Figure 6** for the intensity of crash occurrences within the project area over a three (3) year period from 2016 to 2018. The Crash summary and collision diagrams are included in **Appendix 'B'**.

Based on the 24-hour speed/volume studies, speeding issues are observed at following locations in **Table 1**:

Table 1: Segments with Observed Speeding

Link #	Street	From	To	# of Crashes	Existing Traffic Calming Device
2	SW 22nd St	SW 67th St	SW 66th St	2	No
3	SW 22nd St	SW 65th St	SW 64th Ave	0	Yes
17	SW 65th St	SW 8th St	SW 12th St.	4	Yes
18	SW 64th Ave	SW 8th St	SW 12th St.	5	Yes
36	SW 59th St	SW 12th St	SW 16th St.	8	Yes
A5	SW 67th Ave	SW 10th St	SW 16th St.	45	No - Arterial
A6	SW 67th Ave	SW 16th St	SW 24th St.	37	No - Arterial

Traffic Impact Study

Proposed Developments

The City has approved seven (7) new developments within the project limits. Traffic for the following projects were considered in the analysis:

- Gables Gate Tower – 220 Units
- 2 Publix TIS
- Soleste Alameda - 90 Rental Units
- Soleste Alameda 2 – 216 Rental Units
- 6400 SW 8 St SUPPD
- SW 21 Street & 22 Street
- 2201 SW 67 Avenue Soleste Twenty 2 – 337 Units

The future development project locations are identified in **Figure 7**.

Trip Generation

Weekday morning and evening peak hour trips per the approved traffic impact studies that were prepared for each development were applied to the overall network. The peak hour rates were based on ITE's trip rates and are consistent with trip rate development for each land use. The traffic impact studies used for the report are included in the reference section.

Trip Distribution and Assignment

2019 Background Trips

The trips generated from the proposed developments were distributed to the existing network based on the trip distribution patterns outlined in the traffic studies that were provided to the City for each development. These trips were added to the 2019 existing traffic volumes to determine the 2019 background traffic volumes. **Figure 8** identifies the existing 2019 peak hour traffic volumes and **Figure 9** identifies the background peak hour traffic volumes projected for the project area.

2024 Future Trips

An annual growth rate of 0.5% was added to the 2019 background peak hour traffic to determine the future 2024 traffic volumes. **Figure 10** identifies the future 2024 morning and evening peak hour traffic volumes projected for the project area.

The trip distribution calculations are included in **Appendix 'C'**.

Arterial LOS Analysis

Existing and future conditions were analyzed to identify and compare projected changes in the arterial levels of service (LOS) between the 2004 Traffic impact Study and the current follow up study. The directional LOS is summarized in **Table 2** for street segments along the following six (6) arterials within the project area:

- S. Red Road
- SW 62nd Avenue
- SW 67th Avenue
- SW 16th Street
- SW 24th Street
- SW 8th Street

Table 2: Arterial Level of Service (LOS) Summary Table

The arterial level of service printouts are included in **Appendix 'D'**.

Local Residential Street Traffic Condition Analysis

As a result of the 2004 City of West Miami Engineering Traffic Study, several intersections were identified to be retrofitted with traffic control features. After comparing the occurrence of crashes before and after the traffic calming features were in place, a majority of the locations were observed with reduced crash occurrences over the past three years. **Table 3** identifies the intersections with traffic calming features in place and the subsequent effect on crashes.

Table 3: Residential Streets with Traffic Calming Features

Street Name	Location	2004 TIS Results			Crashes Reduced after TCF Implementation
		2004 Result	TC Feature Implemented	Intersection

Figure 11 provides a map of the locating the intersection and the type of Traffic calming feature implemented.

Traffic Calming Study

Traffic Data Analysis Methodology and Calming Analysis

Criteria pertaining to the effectiveness of traffic calming measures was investigated for the intersections of local roads within the project area. The criteria included an assessment of excessive daily and peak hour traffic volume, speeding, the occurrence of cut-through traffic and the number of crash occurrences within one year. The criteria were used to evaluate the impacts of these occurrences on the intersections and to identify opportunities to implement traffic safety calming measures. **Table 4** provides a summary of the selection criteria used to evaluate each intersection.

Excessive Traffic Volume

Within the project area, bi-directional 24-hour traffic volumes were observed on 51 street segments and TMC's were collected for eight intersections during the weekday morning and evening peak hours. Road segments with 24-hour volume greater than 1,000 vehicles met the selection criteria and were assigned a "1" in **Table 4**. Road segments with peak hour volume greater than 100 vehicles also met the criteria threshold and were assigned a "1" in the table.

Speeding

During the time period the 24-hour traffic volumes were collected, speed data was obtained on the roadway segments. Vehicle speeds were captured for each direction of travel in 15 minute increments. The data summarizes the 85th percentile speeds for the locations studied. The 85th percentile speed is representative of the speed at which 85 percent of vehicles are traveling at or below. Road segments with 85th percentile speeds 5 mph or greater than the posted speed limit meet the selection criteria and are assigned a "1" in **Table 4**.

Cut Through Traffic

As identified earlier, eight segments were identified by the City of West Miami as cut-through routes accessed by local commuters during peak hour times. The observed cut-through roads meet the selection criteria as they are known "cut-through routes" as documented in reports by local residents to the City and observed by City personelle. These locations were assigned a "1" in **Table 4**.

Crash Occurrence

Of the total of 597 crashes that occurred within the project area, a majority occurred on the arterial segments and intersections. However, many occurred at the unsignalized intersections on residential streets. Locations with two (2) or more crash occurrences within one year meet the selection criteria and are assigned a "1" in **Table 4**.

As indicated in **Table 4**, locations totaling 2 or more meet the selection criteria for further investigation and possible recommendations for traffic calming options. These locations are noted in the "Result" column as "YES". Traffic calming feature determination tables are included in **Appendix 'E'**.

Table 4: Summary of Traffic Calming Criteria

Street Name	Location	Selection Criteria					Result
		24Hr Volume	85th th /» Speed	%o Cut-through	Max Peak Hour Volume	Crashes/yr	
SW 23rd St	Between SW 67 th Ave & SW 65 th Ave	0	n/a	1	0	0	n/a

Figure 12 identifies the speed data caputred in the area of where traffic calming are currently in place.

Figure 13 combines the 24-hour volumes, speed and crash data captured within the project area to further identify intersections that may benefit from new or enhanced traffic calming features.

Effectiveness of Existing Roundabouts

Within the project area, there are currently nineteen (19) mini roundabouts in place and five (5) traffic calming devices. As with any geometrical modification, it takes several months for drivers to adjust to new features. The roundabouts and traffic calming devices have been effective in reducing overall speeds and the occurrence of crashes as previously discussed at intersections and on the segments adjacent to the intersections.

Figure 14 provides a comparison of the effectiveness of the traffic calming devices that are in place within the project area.

Enforcement

Based on traffic citations data provided by the City of West Miami PD, over the past three and half years from January 2016 to June 2019, 141 citations were issued for moving violations. As a deterrence, temporary radar trailers and permanent driver feedback signs could be placed near posted speed limit signs as a reminder for drivers to adhere to the area's speed limit. An additional measure to reduce speeds through the neighborhood would be to involve the local police department with an anti-speed detail during peak commute periods. This is a low cost alternative that can be implemented relatively quickly.

Traffic Calming Alternatives

Based on the traffic issues and recommendations made in the 2004 Engineering Traffic Study conducted for the City of West Miami, Traffic Calming Measures (TCM's) were investigated as potential options to reduce the neighborhood's desirability as a cut-through route. Each of the strategies identified in this study were considered on the basis that each one could be constructed within the existing right-of-way. Additionally, prior to implementation all traffic calming strategies need to be approved by Miami-Dade County and required to go through the County's Planning Process. In addition to mini-roundabouts, the following supplementary traffic calming strategies were investigated for this study:

- *Full Closure* - This traffic calming measure consists of severing a portion of the road to create a segment with no outlet. This truncation strategy is quite effective in reducing traffic on a road with high volumes, but can be problematic for local traffic. Additionally, this TCM typically redistributes local through traffic onto adjacent streets. The road closure is typically done with barriers to block entering vehicles. This measure is relatively costly to fully construct with curb. However, temporarily ballards and signs can be installed to test the effectiveness of the option in reducing traffic volume and speed.
- *Half Closure* – Through the use of physical barriers, this traffic calming strategy is used to control the direction of traffic flow on an otherwise two-way road. It is also referred to as a “partial closure” or “one-way closure”. This TCM reduces traffic volumes and

Comparison of Study Accidents by Calming Device

deters cut-through traffic. However, it may redirect traffic onto adjacent streets. Similar to the the “full closure”, this option can be costly to construct on a permanent basis. However, temporarily ballards and signs can be installed to test the effectiveness of this option.

- *Stop Signs* – The installation of “stop signs” at intermediate locations along a stretch of road is effective in reducing speeds and the occurrence of crashes. However, adding stops is not a deterrent for drivers who currently using the road as a preferred cut-through. This option is a low cost alternative.

- *Speed Humps* - The installation of speed humps can be effective in slowing down traffic, and make the route less desirable to cut-through traffic. However, the humps are difficult for emergency vehicles and buses to transverse. This option is considered to be a mid-cost alternative

- *Alternating On-Street Parking* – Allowing on-street parking in designated areas along a street creates periodic shifts in the travel lane pattern. This realignment will reduce traffic speeds along the street and create permissible parking along designated areas. Although it may slightly deter cut-through traffic, it will not reduce the occurrence of crashes or enhance pedestrian safety. This option is considered to be a low cost option.

- *Mid-block Pedestrian Crossings (with Road Signs)* – Installing crosswalks with pedestrian crossing signs in the middle of the road at strategic points along residential street will reduce speeds and may deter some traffic, it will not reduce the occurrence of crashes. Depending on the type of crossing desired (painted crosswalk and signs vs a center curbed median), this option can range from low cost to mid-cost

- *Lane Separation via Curbed Island* – The installation of a curbed island at a mid-block location shortens the width of the perceived travel lanes, thus causing traffic to slow down. A curbed island may also be a part of a mid-block crosswalk, not only slowing down traffic, but also increasing the safety of pedestrians. This TCM may deter some cut through traffic and may reduce the occurrence of crashes. Based on the existing pavement widths of the streets investigated, this strategy would be costly to construct.

Table 5 summarizes the traffic calming strategies previously discussed and the anticipated levels of enhancement along with the estimated levels of funding commitments.

Table 5: Overview of Traffic Calming Strategies

Type of Measure	Traffic Issue Addressed					Cost

Public Involvement

A public workshop was held on April 30th, 2019 to obtain input from residents, businesses and stakeholders on the perceived effectiveness of existing roundabouts in the City and to identify areas with issues regarding traffic flow, bicycle and pedestrian safety. The input received from this workshop was helpful in developing a comprehensive technical analysis of the existing and future needs. On February 4, 2020, a follow up to the April Public Workshop was held at the West Miami Community Center. The study goals were discussed and findings from the traffic data collection and crash analysis were highlighted. The criteria for the traffic calming measure location selection was discussed and the preliminary locations were identified.

Some Traffic Calming Strategies do not involve modifications to infrastructure, but rely on community involvement. In comparison with geometrical and physical improvements, these strategies are relatively inexpensive and can be implemented within a short amount of time. Additional options to involve the residents living within neighborhoods adjacent to the study area include the implementation of a local education campaign to prompt considerate driving habits and the distribution of fliers to residence within the neighborhood to remind them of the dangers of speed. Presentations from the public meetings are included in **Appendix 'F'**.

Conclusion and Recommendations

Proposed Traffic Calming Locations

After reviewing the locations that met the criteria for traffic calming measure implementation, 10 locations were identified for the project. **Table 6** presents a summary of the results of the 2019 analysis and the corresponding recommended traffic calming features.

Table 6: Summary of Recommended Traffic Calming Strategies

Street Name	Location	2019 TIS Results	
		Intersection	Potential TC Feature
SW 22nd St	Between SW 67 th Ave & SW 65 th Ave	SW 66th St	Speed Table
SW 64th Ave	Between SW 21 st Ave & SW 20 th St	SW 20th St.	Roundabout
SW 20th St	Between SW 67 th Ave & SW 63 rd Ave	SW 65th Ave	Roundabout
SW 65th Ave	Between SW 12 th St to SW 8 th St	between SW 10th Terr and SW 11th St	Speed Table
SW 64th Ave	Between SW 14 th St to SW 8 th St	SW 11th St	4-Way Stop
SW 62nd Ave	Between SW 12 th St to SW 8 th St	SW 11th St (east side)	3-Way Stop
SW 62nd Ave	Between SW 12 th St to SW 16 th St	SW 15th St	Roundabout
SW 16th St	Between SW 60th Ct to SW 57th Ave	near school	Speed Table, Patterned Crosswalk
SW 59th Ave	Between SW 12th St & SW 16th St	SW 14th St	4-way stop
SW 9th Terr	Between SW 59 th Ave to SW 57 th Ave	SW 58th Ave	4-way stop

In keeping with the methodology ensued by the 2004 study, a scoring system was used to prioritize the locations that would benefit from the safety enhancements of added traffic calming measures. The 85th percentile speed, current trade off volume and maximum peak hour volume were assigned a range of points that when added up were used to prioritize the locations recommended for implementation. The scoring system used to determine the prioritization is represented in **Table 7**.

Table 7: Summary of Scoring - Traffic Calming Measure Prioritization

Criteria	Point Range	Calculations
85th Percentile Speed	0 - 45	$((85\text{th percentile speed} - \text{speed limit}) \times 136) / \text{speed limit}$
Trade-off Volume	0 - 40	24-hour volume/25
Max Peak Hour Volume	0 - 5	5 points if > 100 vehicles per hour

The calculated values are identified on the prioritization table included in **Appendix 'E'**.

The intersection locations and specific traffic calming features are identified in **Figure 15**.

Order of Magnitude Cost

The costs associated with implementing traffic calming features vary based on the complexity of the device and the time it take to implement. Low cost traffic calming features are recommended to be implemented initially before more costly geometrical improvements are installed. However, for the purpose of this study the perspective locations that met the selection criteria were prioritized and are presented in **Table 8**.

Table 8: Summary of Prioritized Locations for Traffic Calming Measures

Prioritization	Street Name	Location	2019 TIS Results		
			Intersection	Potential TC Feature	Potential Costs of TC Feature
1	SW 65th Ave	Between SW 12 th St to SW 8 th St	between SW 10th Terr and SW 11th St	Speed Table	\$3,000
2	SW 59th Ave	Between SW 12th St & SW 16th St	SW 14th St	4-way stop	\$150/sign
3	SW 62nd Ave	Between SW 12 th St to SW 8 th St	SW 11th St (east side)	3-Way Stop	\$150/sign
4	SW 22nd St	Between SW 67 th Ave & SW 65 th Ave	SW 66th St	Speed Table	\$3,000
5	SW 62nd Ave	Between SW 12 th St to SW 16 th St	SW 15th St	Roundabout	\$150,000
6	SW 16th St	Between SW 60th Ct to SW 57th Ave	near school	Speed Table, Patterned	\$5,000
7	SW 64th Ave	Between SW 14 th St to SW 8 th St	SW 11th St	4-Way Stop	\$150/sign
8	SW 64th Ave	Between SW 21 st Ave & SW 20 th St	SW 20th St.	Roundabout	\$150,000
9	SW 20th St	Between SW 67 th Ave & SW 63 rd Ave	SW 65th Ave	Roundabout	\$150,000
10	SW 9th Terr	Between SW 59 th Ave to SW 57 th Ave	SW 58th Ave	4-Way Stop	\$150/sign

Daily Total Speeds (MPH)

Study Date: Wednesday, 05/15/2019

Unit ID: 0162

Location: SW 15 ST (BTW SW 58 AVE SND SW 57 CT)

Standard Deviation: 6.7 MPH

Mean Speed: 20.9 MPH

Median Speed: 21.4 MPH

Modal Speed: 23.5 MPH

Ten Mile Pace: 16 to 25 MPH

Percent in Ten Mile Pace: 62.1%

85th Percentile: 26.6 MPH

15th Percentile: 13.8 MPH

90th Percentile: 28.6 MPH

95th Percentile: 30.6 MPH

Public Meeting Presentations

Public Meeting

City of West Miami Citywide Traffic Study

Tuesday, April 30, 2019

6:00 p.m. - 8:00 p.m.

LOCATION:

West Miami Community Center
901 SW 62 Avenue, West Miami, Florida 33144

TY·LININTERNATIONAL

Background

- Original Citywide Traffic Study was performed in 2004
- Cut Through traffic and Speeding Drivers
- Study resulted in a Citywide Master Plan for implementation of Traffic Calming Devices
- 22 Traffic Calming Devices installed over the last Decade

Planning Context

- **19% >> >>** increase in City's population between 2010 and 2017
- **Significant** commercial and residential development in the City in the past decade
- **Approximately 33% growth** in **Miami-Dade County's** population and jobs forecasted over the next 25 years

Source: 2045 LRTP, Miami-Dade TPO

Draft Vision Statement

***Enhance the quality of life
by improving
transportation safety,
mobility and accessibility
for all the residents of the
City of West Miami.***

Project Goals

- **To determine the effectiveness of existing traffic circles in the City**
- **To identify areas where traffic flow, bicycle and pedestrian safety measures are needed based on technical analyses and public input**
- **To develop a comprehensive traffic-calming plan for the City to address existing and future safety, accessibility and mobility needs**

Project Schedule

Task Number	Task Description	April	May	June	July	August	September
1	Coordination and Public Involvement						
2	Data Collection						
3	Data Analysis						
4	Recommendation						
5	Documentation						

We are here

Public Workshop #1 : Project Kickoff and Public Input

Public Workshop #2: Draft Plan

Next Steps

- **Obtain public input**
- **Traffic, bike/ped data collection and analysis**
- **Crash data and safety analysis**
- **Identify additional traffic calming measures and develop cost estimates**
- **Prepare draft and final report**

We want to hear from you!!

Public Meeting

City of West Miami Citywide Traffic Study

Tuesday, February 4, 2020

6:00 p.m. - 8:00 p.m.

LOCATION:

West Miami Community Center
901 SW 62 Avenue, West Miami, Florida 33144

TY·LININTERNATIONAL

Agenda

- **Study Goals**
- **Public Workshop Recap, April 2019**
- **Traffic Data Collection & Analysis Findings**
- **Draft Recommendations**
- **Next Steps**

Citywide Traffic Study Goals

- **To determine the effectiveness of existing traffic circles in the City**
- **To identify areas where traffic flow, bicycle and pedestrian safety measures are needed based on technical analyses and public input**
- **To develop a comprehensive traffic-calming plan for the City to address existing and future safety, accessibility and mobility needs**

Public Workshop, April 30, 2019

- **Extensive outreach**
 - Flyers
 - City of West Miami website
 - E-blast
- **More than 40 residents** attended the public workshop and participated in the planning process to identify mobility and safety issues in the City

Public Workshop, April 30, 2019

- Received **20+ location-specific** comments related to cut-through traffic, speeding and bicycle/pedestrian safety
- Received several suggestions for implementing additional traffic calming measures, such as,
 - One-way streets, reduce posted speed limit, street closures, speed humps or speed tables
 - Provide **education/information** on how to navigate a traffic circle
 - **Strict enforcement** with more police officers, license plate readers

Traffic Data Collection (mid-May 2019)

- **Crash data analysis (Years 2016-2018), Signal Four Analysis**
- **Reviewed citations issued from January 2016 to June 2019**
- **24-Hr speed/volume studies at 49 locations (43 residential and 6 arterial streets)**
- **Morning (6 to 9 am) and afternoon (3 to 6 pm) peak hour Turning Movement Counts (TMCs) at 10 intersections for operational analysis**
- **Reviewed previous Citywide Traffic Study, 2004**

Analysis Findings – Crash Data, 2016-2018 & Citations

- Majority of the crashes occur on arterials and tend to be concentrated at intersections as expected given the highest number of conflicts.
- Total # of crashes: 597
- Zero fatalities, 64 crashes involved injuries.
- Six crashes involved pedestrians and three involved bicyclists.
- 141 citations issued for moving violations between January 2016 and June 2019

Analysis Findings – 24-Hour Speed/Volume Studies

- Compared to 2004, approximately **50% reduction in crashes** (from 28 to 14 crashes) at locations where traffic calming measures were implemented .
- Traffic calming devices have been **effective in addressing vehicle speeds at 18 of the 22 locations (or 88%) in the City**
- Based on 24-hour speed/volume studies, speeding issues are observed at following locations:
 - SW 22nd St - Between SW 67th Ave & SW 65th Ave (2 crashes)
 - SW 22nd St - Between SW 65th Ave & SW 64th Ave (0 crashes, existing traffic calming device)
 - SW 65th Ave - Between SW 12th St to SW 8th St (4 crashes, existing traffic calming device)
 - SW 64th Ave - Between SW 14th St to SW 8th St (5 crashes, existing traffic calming device)
 - SW 59th Ave - Between SW 12th St & SW 16th St (8 crashes, existing traffic calming device)
 - SW 67th St - Between SW 10th St & SW 16th St (Arterial, 45 crashes)
 - SW 67th St - Between SW 16th St & SW 24th St (Arterial, 37 crashes)

Analysis Findings – Intersection Operational Analysis

- **Based on PM peak hour traffic operations analysis the following intersections will operate below accepted level of service 'D' in the short term (Year 2024) compared to today.**
 - SW 8th Street and SW 67th Avenue (additional delay 29 seconds, LOS F)
 - SW 8th Street and SW 57th Avenue
 - SW 16th Street at SW 57th Avenue (additional delay 20 seconds, LOS F)

Recommendations for Traffic Calming Measures

Location Selection Criteria

- 24-hour traffic
- 85th percentile speed
- Percent cut-through traffic
- Maximum peak hour traffic volume
- Number of crashes per year

	Street Name	Location	2019 TIS Results		
			Total Prospective New TCF	Intersection	Potential TC Feature
2	SW 22nd St	Between SW 67 th Ave & SW 65 th Ave	1	SW 66th St	Speed Table
4	SW 64th Ave	Between SW 21 st Ave & SW 20 th Ave	1	SW 20th St.	Roundabout
5	SW 20th St	Between SW 67 th Ave & SW 63 rd Ave	1	SW 65th Ave	Roundabout
17	SW 65th Ave	Between SW 12 th St to SW 8 th St	1	between SW 10th Terr and SW 11th St	Speed Table

25	SW 62nd Ave	Between SW 12 th St to SW 8 th St	1	SW 11th St (east side)	3-Way Stop
26	SW 62nd Ave	Between SW 12 th St to SW 16 th St	1	SW 15th St	Roundabout
34	SW 16th St	Between SW 60th Ct to SW 57th Ave	1	near school	Speed Table, Patterned Crosswalk
36	SW 59th Ave	Between SW 12th St & SW 16th St	1	SW 14th St	4-way stop
44	SW 9th Terr	Between SW 59 th St to SW 57 th Ave	1	SW 58th Ave	TC feature
45	SW 10th St	Between SW 58th Ct to SW 57th Ave	1	SW 58th Ave	Roundabout
A1	SW 8th St	Between SW 67 th Ave & SW 62nd Ave	1		
A2	SW 8th St	Between SW 62nd Ave & SW 57 th Ave	1		
A3	SW 57th St	Between SW 8 th Ave & SW 11 th Ave	1		
A4	SW 67th St	Between SW 8th St & SW 10th St	1		
A5	SW 67th St	Between SW 10th St & SW 16th St	1		
A6	SW 67th St	Between SW 16th St & SW 24th St	1		

Next Steps

- **Incorporate public feedback**
- **Additional traffic data collection and analysis**
 - 63rd Avenue
 - 11th Street
- **Prepare draft and final report**
- **City Commission Meeting**

We want to hear from you!!
