INTRODUCTION

Located in the North-Central area of Miami-Dade County, the City of Miami Gardens is generally bounded by Countyline Road to the north, NW 151st Street to the south, N Miami Avenue/NE 2nd Avenue to the east, and NW 47th Avenue and NW 57th Avenue to the west. As the third largest city in Miami-Dade County, Miami Gardens spans approximately 20 square miles and is home to over 105,000 residents, as well as SunLife Stadium, Calder Race Track, and several bustling commercial corridors. With its proximity to the Golden Glades Interchange, the City is easily accessed by Florida's

Turnpike, Interstate 95, and the Palmetto Expressway (SR 826). In addition, the South Florida Regional Transportation Authority (SFRTA) Tri-Rail commuter rail line runs along the southeast border of the City. The City's Parks and Recreation Department boasts 18 municipal parks along with the county's Library Walking Trail, Dolphin Linear Park, Snake Creek Trail, and Scrub Oak Preserve.

Dolphin Linear Park in Miami Gardens

It is critical to enhance non-motorized transportation mobility and accessibility in Miami Gardens to connect the City's activity centers, neighborhoods, and community facilities. Pedestrian and bicycle-friendly environments invite residents to patronize local businesses, walk or bike to work and school, and access public transportation for longer trips. Furthermore, promoting walking and bicycling in Miami Gardens achieves important sustainability, health, and recreation goals as well.

The City of Miami Gardens is continually seeking ways to enhance its pedestrian and bicycle facilities. Collectively, the City's Recreational Trails Master Plan, Comprehensive

Development Master Plan, and Roadway Assessment Study have been the springboard towards the vision and development plan for the future of pedestrian and bicycle facilities in Miami Gardens. This Plan presents improvement strategies developed through technical analysis to enhance the important non-motorized transportation network of Miami Gardens.

With few existing bicycle lanes in the City, bicyclists often ride on sidewalks on busy roads such as along S.R. 7 (U.S. 441)

Most streets in Miami Gardens have sidewalks; however, many busy roads have numerous driveway connections, which increases conflict points

PLAN OBJECTIVE

The primary objective is to prepare a bicycle and pedestrian mobility plan for the City of Miami Gardens.

This mobility plan should develop and recommend projects to help connect the City's activity centers, neighborhoods, and community facilities. The plan should incorporate the City's existing Recreational Trails Master Plan with greenways and blueways and an established sidewalk construction program based on the city-wide comprehensive Roadway Assessment Study. Furthermore, this mobility plan should utilize urban design concepts to:

- Enhance the city-wide bicycle/pedestrian safety network
- Provide bicycle facilities and amenities for use as a method of transportation
- Improve traffic flow and safety for intermodal transportation
- Refine goals as identified in the City's Transportation Element of the Comprehensive Development Master Plan

The development of this plan should incorporate public input and participation.

The Plan addresses non-motorized mobility and transit connectivity

PURPOSE AND NEED

Improving bicyclist and pedestrian mobility within the City of Miami Gardens is consistent with the City's Comprehensive Development Master Plan (CDMP) and also helps to meet several important community objectives. The first goal of the Transportation Element of the City's CDMP is to develop and maintain a safe, convenient, accessible and efficient transportation system. Within this goal, the City lists several strategies such as designing for pedestrian accessibility and installing bicycle lanes and bicycle parking as well as an overall objective to provide a safe and convenient pedestrian and bicycle network including links to schools, recreational facilities, bus stops, and major trip generators.

Active Transportation

Bicycling, walking, and accessing public transportation are forms of active transportation. There are numerous health, environmental, and economic benefits related to active transportation. Because active transportation requires physical activity, it helps address many modern public health concerns including anxiety disorders, depression, diabetes, early death, heart disease, high blood pressure, obesity, and stress. Encouraging active transportation can reduce private motor vehicle usage, in turn decreasing pollution and improving air quality. Furthermore, designing for pedestrian and bicycle use can increase property values, attract new commercial and residential development, boost local revenues, and reduce roadway construction and maintenance costs.

Safety

Bicyclists and pedestrians are over-represented within traffic crash data both at the national and local levels. Over 30,000 Americans perish each year in traffic crashes (National Highway Traffic Safety Administration, Fatality Analysis Reporting System [FARS], 2009 data). Pedestrians account for a significantly higher percentage of

fatalities than their typical mode share would indicate (4,092 pedestrians died in traffic crashes in 2009, which represented 12.1 percent of all traffic fatalities). Bicyclists (termed pedalcyclists in the FARS database) are also overrepresented (630 bicyclists died in traffic crashes in 2009, which represented 1.9 percent of all traffic fatalities). Miami-Dade MPO data indicate that a similar over-representation of bicyclists and pedestrians exist at the local level. A good complete street network, including accommodations for bicyclists and pedestrians to travel along the streets and to safely cross the streets, is a powerful tool for reducing traffic crashes and fatalities.

Recreation

In addition to improving transportation mobility, bicycle and pedestrian facilities offer excellent opportunities for citizens to enhance their recreational opportunities. These facilities can be considered links in the recreational network as well as the transportation network. Recreation facilities can protect and preserve the natural environment, help young residents develop into contributing members of society, allow for older residents to remain active, and yield more desirable communities to live, play, work, and visit.

Equity

Investing in bicycle and pedestrian infrastructure gives people of all ages, abilities, and income more options when making essential trips such as to work, to school, to the grocery store, or for healthy recreation. Walking, bicycling, and taking public transportation are cheaper forms of personal transportation than relying on automobiles and help communities meet social equity goals.

Healthy Communities

By enhancing connectivity, bicycle and pedestrian networks give residents the opportunity to choose to walk or bike to a nearby store, shopping center, park, library,

cultural center, work, transit station, and just about any other destination desired. The increased active transportation and recreational opportunities contribute to healthy lifestyles and community vitality. Currently, one-third of our nation's children are overweight or obese, 35 percent of U.S. adults are obese, and an additional one-third of adults weigh more than deemed healthy according to the Centers for Disease Control and Prevention (CDC). A recent review of census and CDC data by GOVERNING, a media platform for state and local government leaders, shows that residents in communities with higher levels of biking and walking to work had overall healthier weights. The CDC identified a strong correlation between planning and investments in infrastructure and some of the most serious health concerns facing the United States, including heart disease, obesity, and diabetes. The CDC's list of transportation recommendations includes promoting active transportation by providing safe and convenient bicycling and walking facilities.

LITERATURE REVIEW

An important element of a successful multimodal mobility plan is to understand prior initiatives that can provide information about the context within which this plan exists and can provide information about projects that can be used as a starting point for enhancing multimodal mobility. Recommendations and projects identified in prior studies that may affect the outcome of this plan have been identified.

The following data sources, studies, and plans were reviewed as part of this effort. A brief summary of the review of each item is included.

- National Household Travel Survey
- U.S. Census Journey-to-Work
 Data
- Florida Department of Transportation Work Program
- Miami-Dade MPO Transportation Improvement Program (TIP)
- Miami-Dade MPO 2035 Long Range Transportation Plan (LRTP)

Trails provide recreational and transportation opportunities

- USDOT Complete Streets
- Context Sensitive Solutions
- NACTO Urban Bikeway Design Guide
- FHWA's How to Develop a Pedestrian Safety Action Plan
- City of Miami Gardens Recreational Trails Master Plan
- State Road 7 Livable Communities Corridor Study
- City of Miami Gardens Roadway Assessment Report

National Household Travel Survey

According to the 2009 National Household Travel Survey, nearly one-half of all trips are less than three miles in length. Approximately 28 percent of trips are less than one mile, yet less than one percent of all trips are made by bicycle.

Active transportation, such as bicycling, walking, or accessing public transportation, has the potential to serve a greater market share of trips than it currently does. Facilities such as wide sidewalks, pedestrian crossing features at key intersections, bicycle parking areas, and interconnected bike lanes are important for attracting a greater modal share for alternative travel modes. Focusing planning efforts on alternative transportation modes is vital.

U.S. Census Journey-to-Work Data

The United States Bureau of the Census measures transportation data for work trips only using a sampling of respondents that complete the census long form as part of the annual American Community Survey (ACS). Updated socioeconomic, demographic, and housing information is now available on an annual basis. The 2006-2010 ACS 5-Year Estimates were used for this analysis.

Work trip characteristics in the City of Miami Gardens demonstrate that residents are less likely to make work trips on foot or by bicycle than in the County and State as a whole. "Drove alone" is the dominant journey-to-work mode within the City of Miami Gardens, with the percentage of single occupant vehicles at about 5 percent more than in the County and over 2 percent more than in the State as a whole.

	City of Miami Gardens		Miami-Dade County		State of Florida	
Description	Number	Percent	Number	Percent	Number	Percent

Table 1: Journey to Work Data

Florida Department of Transportation Work Program

The Florida Department of Transportation (FDOT) prepares an annual work program for projects to be completed in the next five years. Miami-Dade County falls within the jurisdiction of FDOT District Six. The FDOT 2012 – 2016 work program was reviewed to determine what projects are expected to be completed within the next five years. According to Florida Statute 335.065, bicycle and pedestrian ways shall be established in conjunction with the construction, reconstruction, or other change of any state transportation facility. The following projects are programmed by FDOT that are of interest to this Plan.

Miami-Dade MPO Transportation Improvement Program (TIP)

The Miami-Dade MPO prepares the annual Transportation Improvement Program (TIP) consistent with federal guidelines. The TIP in effect at the time of this Plan is the FY 2011/12 to FY 2015/16 TIP approved by the Miami-Dade MPO Governing Board on June 23, 2011. The TIP specifies proposed transportation improvements to be implemented in Miami-Dade County over the coming five years. The TIP was reviewed to determine programmed projects within the study area. Programmed projects are depicted in Table 3. FDOT projects identified in the previous section under FDOT Work Program are not repeated in Table 3.

* Project completion date

Miami-Dade MPO 2035 Long Range Transportation Plan (LRTP)

The Miami-Dade Metropolitan Planning Organization (MPO) updates their LRTP every five years per federal legislation requirements. The LRTP outlines expenditures for surface transportation programs including highways, transit, safety, research and freight. The current LRTP is for long term planning horizon 2035. The 2035 LRTP was adopted by the MPO Governing Board late 2009. The plan addresses several transportation improvements, including mobility, safety, security, economic vitality, environment, connectivity, and system preservation. The plan identified several projects within Miami Gardens. Some of these projects include roadway widening and bicycle and pedestrian facilities. Table 4 and Table 5 summarize these projects.

Table 4: Miami-Dade 2035 LRTP Cost Feasible PlanProjects in Priorities I to IV

Facility	From	То	Description

Complete Streets (USDOT)

In March 2010, the Secretary of the United States Department of Transportation (USDOT) announced the end of favoring motorized transportation at the expense of non-motorized transportation. To accomplish this objective, the USDOT is directing state DOTs, MPOs, and local jurisdictions to:

- Treat walking and bicycling as equals with other transportation modes,
- Go beyond minimum standards within a context sensitive solution,
- Collect data on walking and bicycling trips, and
- Improve non-motorized facilities during maintenance projects.

Complete streets are designed and implemented to enable safe access for all users so that pedestrians, bicyclists, transit passengers, and motorists of all ages and abilities are not discriminated against in the design of the transportation network. Complete streets are defined by the National Complete Streets Coalition (NCSC), a national nonprofit partnership, as safe, comfortable and convenient for travel by everyone, regardless of age or ability – motorists, pedestrians, bicyclists, and public transportation riders.

In 1984, the State of Florida adopted a Statute for Bicycle and Pedestrian Ways (Florida Statute 335.065), which is widely regarded as an early form of the complete streets principle. Over the years this initiative has evolved to its current form where it states that both bicycle and pedestrians shall be given full consideration in the planning and development of transportation facilities, with a special emphasis to projects within one mile of an urban area.

Context Sensitive Solutions

The concept of Context Sensitive Solutions (CSS) has been around since late 1960's when the National Environmental Policy Act (NEPA) of 1969 required transportation agencies to consider the possible adverse effects of transportation projects on the environment.

In the late 1990's, the American Association of State Highway and Transportation Officials (AASHTO) and the Federal Highway Administration (FHWA) jointly sponsored the "Thinking Beyond the Pavement" national conference, which generated the definition of context sensitive design (CSD). It was then that CSS really gained significant momentum.

In the fall of 2006 AASHTO's Center for Environmental Excellence and FHWA sponsored a conference, whose results generated the following definition of CSS:

"Context sensitive solutions (CSS) is a collaborative, interdisciplinary approach that involves all stakeholders in providing a transportation facility that fits its setting. It is an approach that leads to preserving and enhancing scenic, aesthetic, historic, community, and environmental resources, while improving or maintaining safety, mobility, and infrastructure conditions".

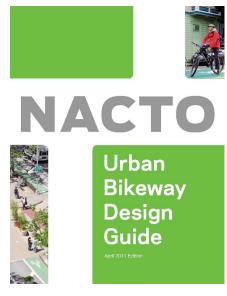

The core principles of CSS are applied to transportation planning and design and are especially relevant within the context of the City of Miami Gardens. One of them emphasizes exercising flexibility and creativity to shape effective transportation solutions, while preserving and enhancing community and natural environments. In addition, CSS design stresses that in urban environments pedestrians should not be expected to make inconvenient diversions from their travel paths to cross an intersection or a roadway.

NACTO Urban Bikeway Design Guide

The National Association of City Transportation Officials (NACTO) Urban Bikeway Design Guide was developed as part of the Cities for Cycling initiative and offers guidance to cities seeking to improve bicycle transportation and create safe and enjoyable complete streets.

The Guide details state-of-the-practice design treatments that are used in the world's most bicycle friendly cities including:

- Bike Lanes
 - Conventional Bike Lanes
 - Buffered Bike Lanes
 - Contra-Flow Bike Lanes

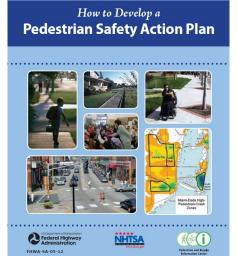

- Left-Side Bike Lanes
- Cycle Tracks
 - One-Way Protected Cycle Tracks
 - Raised Cycle Tracks
 - Two-Way Cycle Tracks
- Intersections
 - Bike Boxes
 - Intersection Crossing Markings
 - Two-Stage Turn Queue Boxes
 - Median Refuge Island
 - Through Bike Lanes
 - Combined Bike Lane/Turn Lane
 - Cycle Track Intersection Approach
- Bicycle Signals
 - Bicycle Signal Heads
 - Signal Detection and Actuation
 - Active Warning Beacon for Bike Route at Unsignalized Intersection
 - \circ Hybrid Signal for Bike Route Crossing of Major Street
- Bikeway Signing and Marking
 - Bike Route Wayfinding Signage and Markings System
 - Colored Bike Facilities
 - Shared Lane Markings

How to Develop a Pedestrian Safety Action Plan (FHWA)

The Federal Highway Administration's (FHWA) guide on How to Develop a Pedestrian Safety Action Plan was created to assist state and local agencies in forming and implementing their own Pedestrian Safety Action Plans and enhancing their existing pedestrian safety programs and activities. It includes guidance on:

- Involving stakeholders throughout the planning process
- Collecting data and identifying pedestrian safety problems
- Prioritizing concerns and pedestrian safety improvements
- Selecting engineering countermeasures and other safety-related treatments
- Providing funding
- Creating a Pedestrian Safety Action Plan

Walking is the fundamental mode of human mobility; however, many of our nation's streets and highways were primarily built to facilitate the smooth flow of motor vehicles. Transportation professionals need to focus on the following areas to make streets safer for pedestrians:

- Slowing vehicle speeds
- Reducing street crossing distances for pedestrians
- Improving the visibility of pedestrians and motorists
- Increasing the level of caution taken by pedestrians and motorists
- Providing pedestrian facilities (sidewalks, crossing islands, etc.) where the needs and potential crash reductions are the greatest

City of Miami Gardens Recreational Trails Master Plan

In 2005, the City of Miami Gardens began developing the Recreational Trails Master Plan (RTMP) to look beyond the idea of traditional parks for recreational opportunities and develop the idea of non-traditional linear parks and trails due to the lack of land available for park expansion. The objective of the RTMP is to define the City's present and future recreational trail development and maintenance direction in an effort to identify a potential system of safe interconnected trails throughout the City that would

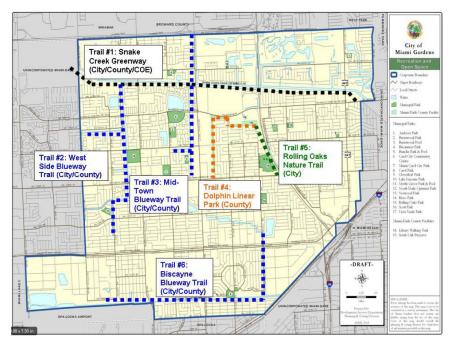

allow for residents to walk or bike to work, school, and other destinations. The RTMP identifies six proposed trails that will comprise the Miami Gardens Trail System (shown in the map below):

- #1: Snake Creek Canal Greenway Trail Corridor
- #2: West Side Blueway Trail
- #3: Mid-Town Blueway Trail
- #4: Dolphin Center Park Walking Trail
- #5: Biscayne Blueway Trail
- #6: Rolling Oaks Nature Trail

For each of the proposed trails, the RTMP details the route description, linkages, character, expected users, typical section, and natural and cultural resources. It also lists trail standards and basic design elements, such as environmental issues, accessibility, trail user groups, types of trails, street crossings, trailheads, and signage. The appendix of the RTMP includes trail safety and etiquette guidelines for all users, cyclists, and dog owners.

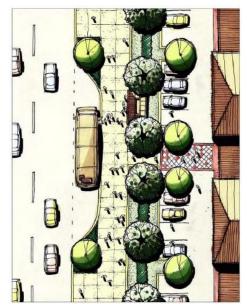

State Road 7 Livable Communities Corridor Study

Within the City of Miami Gardens, State Road 7 (S.R. 7) is primarily a six-lane divided north-south roadway that provides access to employment, shopping, various transit options, and nearby residential neighborhoods. The Livable Communities Corridor Study was completed as a part of the Florida Department of Transportation's (FDOT) Livable Communities Initiative (LCI) in an effort to define a set of improvements that could be made to the S.R. 7 corridor to enhance mobility, safety, and quality of life. The study included an analysis of existing conditions, meetings with the community, identification and evaluation of mobility options, analysis of different build alternatives, and final recommendations. The final recommendations include:

- Implementing a 19-foot frontage buffer along the corridor to be utilized for pedestrian improvements, bus stop improvements, landscaping, utilities, and open space
- Encouraging mixed-use development along the corridor
- Creating a gateway treatment at the ends of the corridor to denote the entrance to Miami Gardens
- Installing bus bays at several bus stops
- Starting a transit circulator to connect the residential and commercial areas

- Creating a trailhead park at the intersection of S.R. 7 and the Snake Creek Bike Trail
- Establishing a consistent visual theme along the corridor including landscaping, site principles, signage and site furnishings, and architectural style and appearance
- Improving landscaping in the median and along the buffer

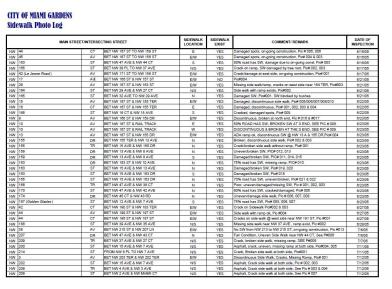

- Installing intersection improvements that enhance the livability and walkability of the community, such as lighted street signage, ADA accessible curb cuts, brick paver crosswalks, and thematic gardens
- Applying traffic signal coordination along the corridor
- Pursuing commercial driveway consolidation along the corridor
- Providing preferential parking for carpools and vanpools at offices
- Implementing various land use policies and regulations

City of Miami Gardens Roadway Assessment Report

In May of 2003, the City of Miami Gardens was incorporated and the ownership of the local and collector right-of-ways within the city limits transitioned from the Florida Department of Transportation to the City. In conjunction with this transition, the City of Miami Gardens retained Kimley-Horn and Associates, Inc. to perform a city-wide visual assessment of the roadway pavement conditions, sidewalks, and bus shelters in 2005.

Of specific interest to this Plan, is the sidewalk assessment, which included whether a sidewalk existed or did not exist and if it did, on what side of the roadway. The analysis of existing sidewalks identified areas within the City where the sidewalks were either damaged or did not meet the specification of the Americans

with Disabilities Act (ADA). The sidewalk evaluations were based on general damage, vertical separation, and standard ramps and noted deficiencies such as cracks in the

sidewalks, sidewalk failures, tripping hazards, and limited handicap ramp access to sidewalks.

After the assessments were completed, a list of improvement projects was compiled to create the Capital Improvement Program (CIP). As part of the CIP, a sidewalk repair and replacement program was developed that would address sidewalk issues including providing a continuous sidewalk network and upgrading deficiencies such as poor condition, substandard ramps, and excessive vertical separations.

TRANSPORTATION MOBILITY ANALYSIS

A general transportation mobility analysis is conducted to identify bicycle and pedestrian mobility issues through data analysis in the City of Miami Gardens. The analysis was based on existing conditions, data collected for this Plan, and an online bicycle and pedestrian survey. The purpose of this task is to collect data that will allow the study team to properly assess the existing conditions of alternative travel modes in Miami Gardens, and to analyze the future bicycle and pedestrian infrastructure needs.

GIS Data Map Series

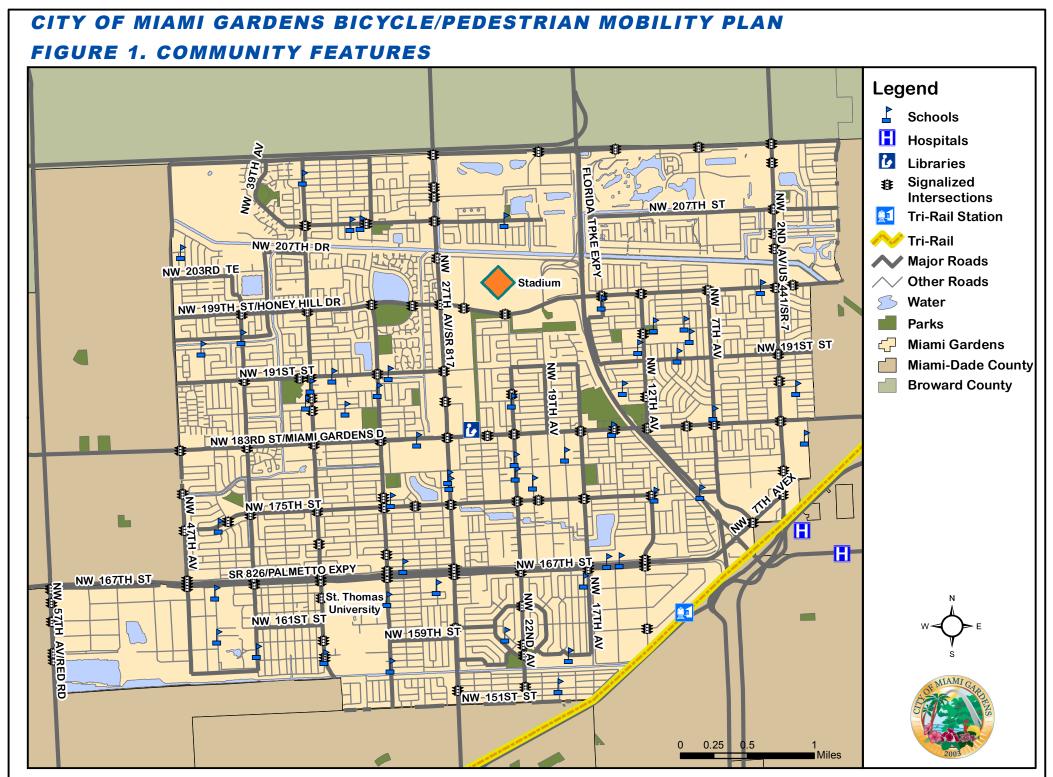

Using geographic information systems (GIS), a map series was prepared to illustrate existing transportation mobility conditions and community features in Miami Gardens that help form the background conditions for improving the City's bicycle and pedestrian mobility.

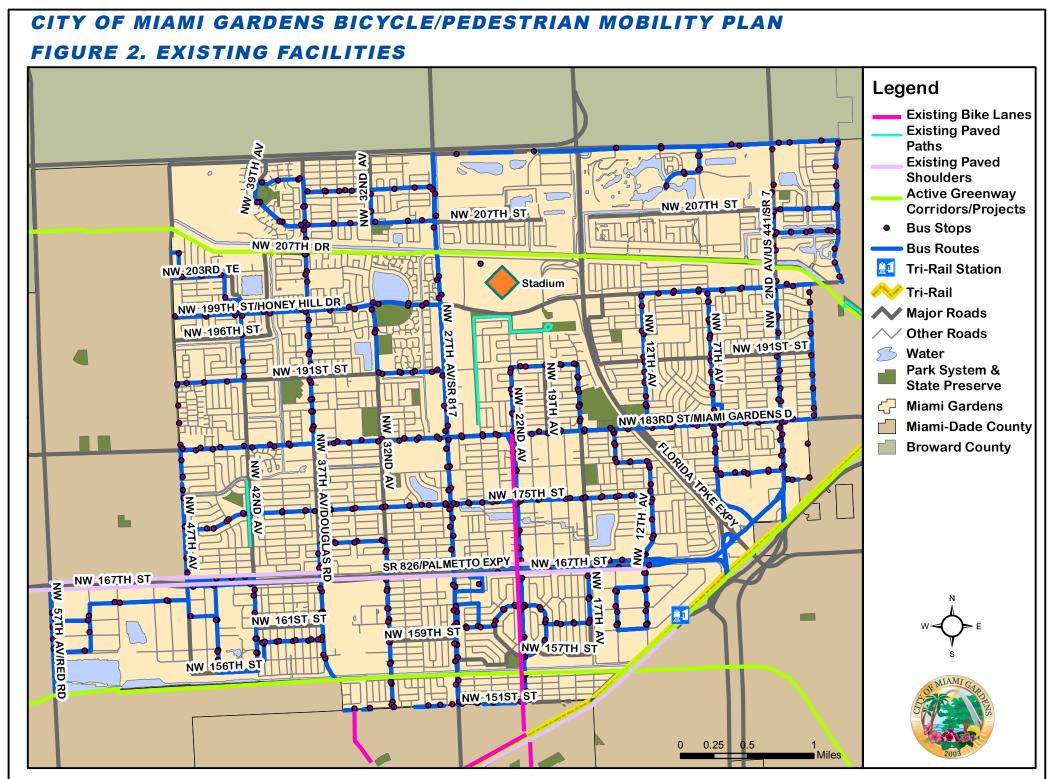

Figures 1 through 12 present the GIS Data Map Series.

Field Observations

Results of the field observations discovered that within Miami Gardens, most major roadways have sidewalks but there are very few bicycle facilities. In addition, the existing sidewalks are often of the minimum width allowed in design manuals such as the *Manual of Uniform Minimum Standards for Design, Construction, and Maintenance for Streets and Highways* (a.k.a. the "Florida Greenbook") and the *FDOT Plans Preparation Manual*. It was noted that very few corridors provide a wide sidewalk with physical separation from motor vehicle traffic, as recommended in the CSS guidelines. It was also noted that the average curb lane width along major corridors is approximately 11 feet, which potentially limits the future development of on-road bicycle facilities without major roadway reconstruction. Lower volume and lower speed roadways are good candidates to develop "bicycle routes", "sharrow streets", or "bicycle boulevards." Additional pedestrian/bicycle mobility issues were identified during the field reviews. These issues may be summarized as follows.

- Pedestrian corridors are designed to meet minimum standards and are not context sensitive.
- Several major intersections have unmarked crossings on at least one approach.
- Development patterns and lack of a well-connected grid street network have led to extremely long blocks on major corridors, which have led to extremely long distances between marked crosswalks on major corridors.
- Many bus stops do not have adequate crosswalks nearby.
- High occurrence of improvised bicycle parking, indicating some latent demand.
- Florida's Turnpike forms a significant barrier to east-west flow.
- Low level of connectivity between the City and the Golden Glades Tri-Rail Station.

Bicycle and Pedestrian Levels of Service

BLOS and PLOS were calculated according to the methodology established in the 2009 FDOT Quality/Level of Service (QLOS) Handbook. The BLOS Model is based on the following facility characteristics:

- Average effective width of the outside thru lane
- Number of thru lanes
- Motorized vehicle volumes
- Motorized speeds
- Heavy vehicle (truck) volumes
- Pavement conditions

In the BLOS Model, bicycle levels of service are determined by assessing the above variables in the following equation and then applying the LOS thresholds, shown in Table 6, to the calculated scores.

 $BLOS = 0.507 / n(Vol_{15}/L) + 0.199SP_t(1 + 10.38HV)^2 + 7.066(1/PR_5)^2 - 0.005(W_e)^2 + 0.760$

Similar to the required BLOS roadway characteristic criteria PLOS Model requires additional variable information to complete its assessment and calculate its LOS. The facility characteristics needed to complete the PLOS calculation are listed below:

- Existence of a sidewalk
- Lateral separation of pedestrians from motorized vehicles
- Motorized vehicle volumes
- Motorized vehicle speeds

In the PLOS Model, pedestrian levels of serve are determined by assessing the above variables in the following equation and then applying the LOS thresholds, shown in Table 6, to the calculated scores.

```
PLOS = -1.2276 ln(W_{ol} + W_l + f_p \times \text{\%OSP} + f_b \times W_b + f_{sw} \times W_s) + 0.0091(Vol_{15}/L) + 0.0004SPD^2 + 6.0468
```

LOS	Score
А	≤1.5
В	>1.5 and ≤2.5
С	>2.5 and ≤3.5
D	>3.5 and ≤4.5
E	>4.5 and ≤5.5
F	>5.5

Table 6: Bicycle and Pedestrian LOS Categories

In order to provide the most accurate analysis of BLOS and PLOS, a spreadsheet consisting of major state and county road segments located in Miami Gardens was utilized. These segments were split into directions, therefore giving the possibility to have a unique Pedestrian Level of Service on both sides of each road. As the spreadsheet was originally created in 2002, updates were needed to make the information valid for 2011. The traffic volume (ADT), directional factor (D), and hourly factor (K_d) were updated based on information from the Florida Department of Transportation and the Miami-Dade Public Works and Waste Management Department. Sidewalk data for the PLOS calculations were updated segment by segment, first by

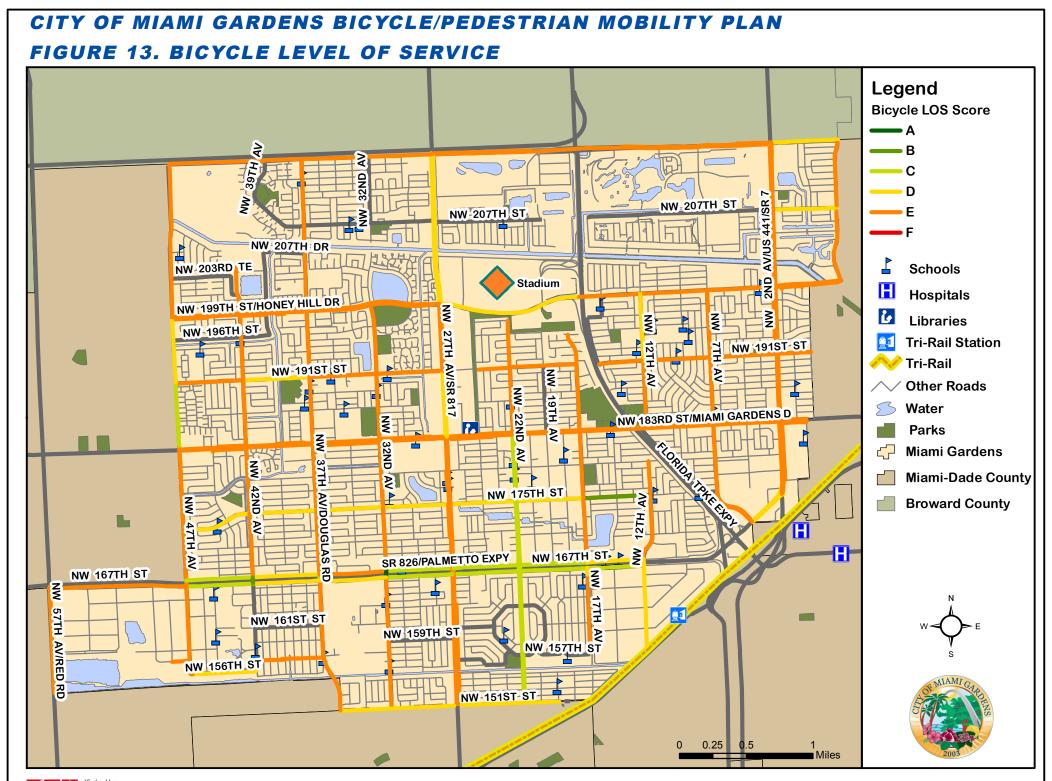

verifying the presence of sidewalks, then measuring the sidewalk width, the buffer width, and the tree spacing in the buffer. The spreadsheet was also revised to correct any segments that were either mislabeled or no longer exist.

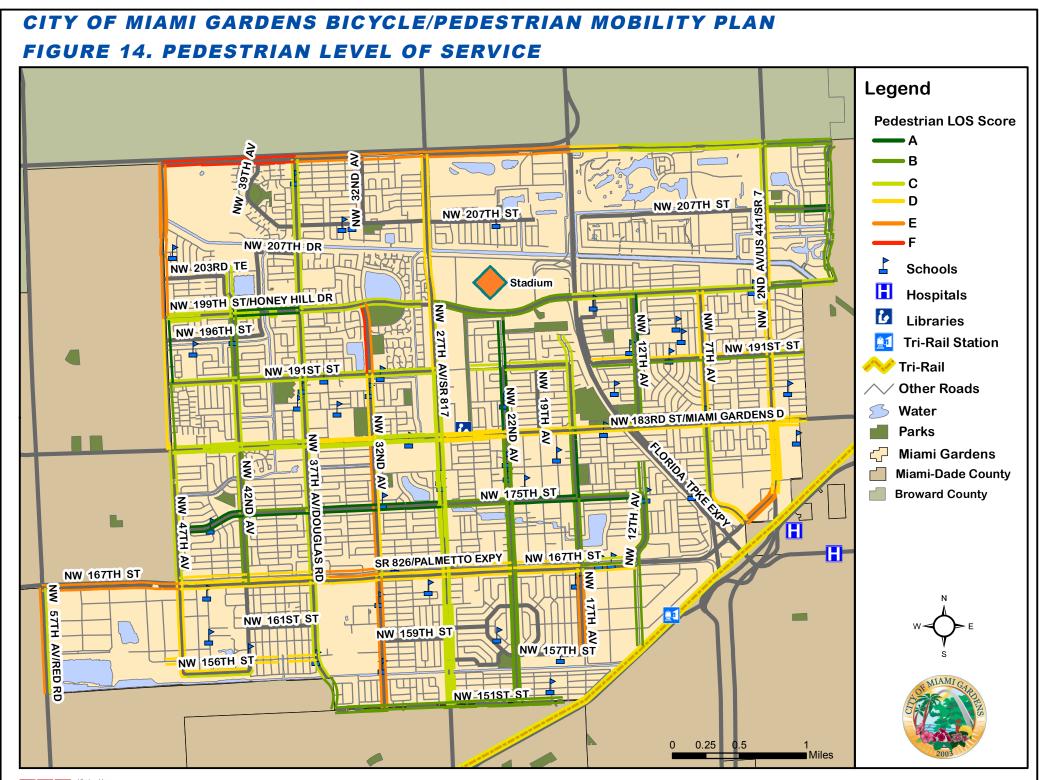

Each segment in the spreadsheet received a unique number created so that it could interact with the NAVTEQ street database. The NAVTEQ database is the most comprehensive street database of its kind, and is updated quarterly. Once every segment was given a number, the spreadsheet was joined with the NAVTEQ database to create the maps that provide a visual reference for the levels of service ranging from A to F. Due to varying sidewalk conditions on the different sides of the segments, there are two pedestrian levels of service for each segment showing the PLOS on each side of the segment. Figures 13 and 14 present the BLOS and PLOS ratings calculated for major roadways within the municipal boundaries. The calculation spreadsheets for BLOS and PLOS are included in Appendix A.

, Inc.

The results of the BLOS analysis show that over 70 percent of the major roadways within Miami Gardens have a BLOS of E and no major roadway segments within the municipal boundaries have a BLOS of F. A summary of the BLOS results are presented in Table 7.

BLOS Score	Percentage of Major Roads
А	0.7%
В	1.4%
С	7.0%
D	18.2%
E	72.7%
F	0.0%

Table 7: Miami Gardens Bicycle Level of Service Summary

As shown in Table 8, the majority of the main roadways within Miami Gardens have a PLOS of C or D. There are only a few major roadway segments within the municipal boundaries that have a PLOS of F.

Table 8: Miami Gardens Pedestrian Level of Service Summary

PLOS Score	Percentage of Major Roads
А	9.2%
В	22.1%
C	35.9%
D	24.0%
E	7.6%
F	1.1%

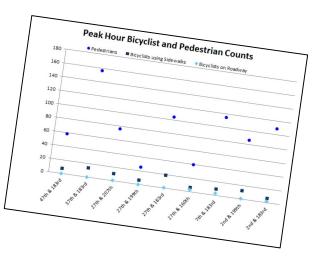

Bicyclist and Pedestrian Counts

In order to capture the magnitude of pedestrian and bicycles at major intersections within the City, 4-hour counts were collected at the nine locations in Figure 9. Bicycle and pedestrian counts help to monitor locations, better define safety issues, develop improvements, and prioritize locations for implementation. In addition, bicycle and pedestrian counts could be used to define bicycle safety issues (i.e., crashes) in relation to exposure.

The counts were collected during a typical weekday afternoon from 2:00 P.M. to 6:00 P.M. in April 2013. The following types of counts were performed:

- Pedestrians crossing each leg in each direction
- Bicyclists crossing each leg in each direction (for bicyclists using sidewalks)
- Bicyclist turning movements (for bicyclists on roadways)

Peak hour pedestrian counts ranged from 26 to 157 pedestrians per hour between the nine intersections, with an average count of 86 pedestrians per hour per intersection. The sidewalk bicyclist counts ranged from 7 to 19 bicyclists per hour per intersection while the roadway bicyclist counts ranged from zero to three bicyclists per hour per intersection. Detailed count data is included in Appendix B.

Traffic Crash Data

High crash clusters, corridors, and intersections were identified based on geographic information systems (GIS) crash data mapping. Figures 15, 16 and 17 depict the bicycle

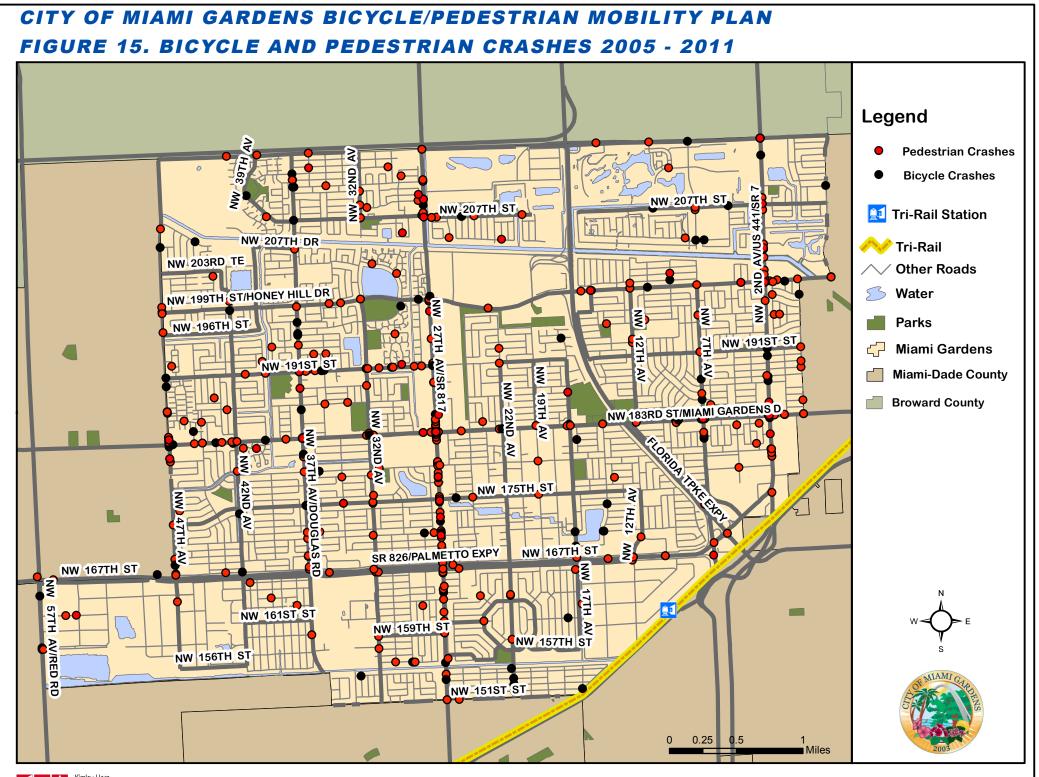

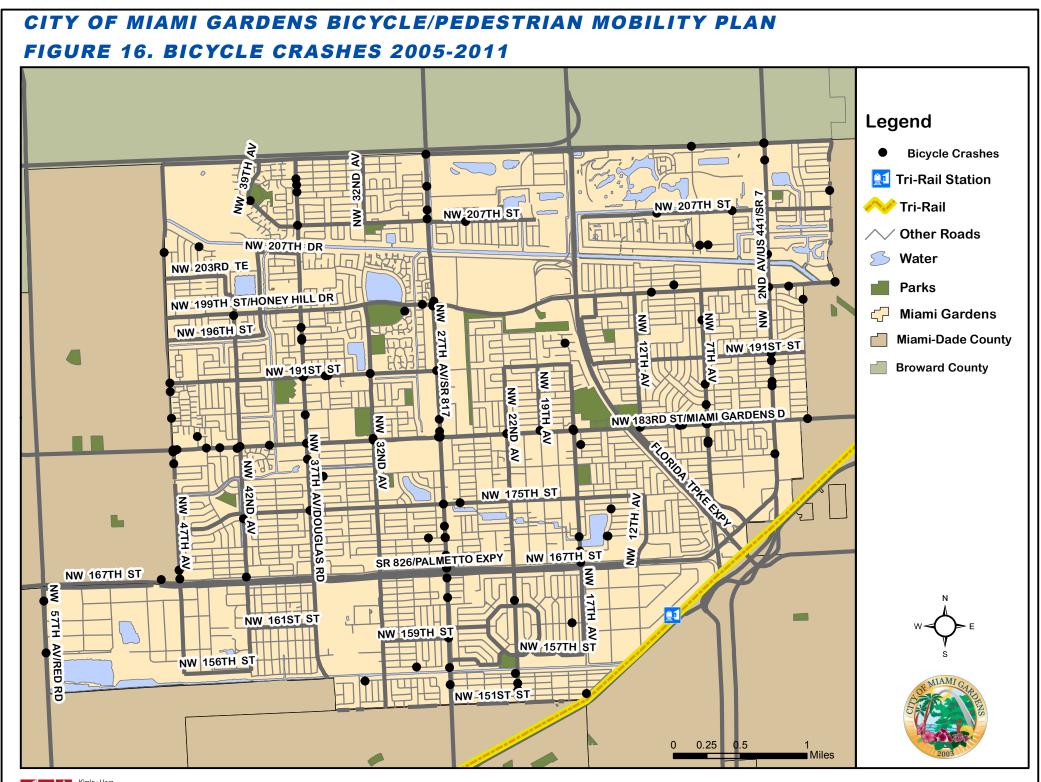

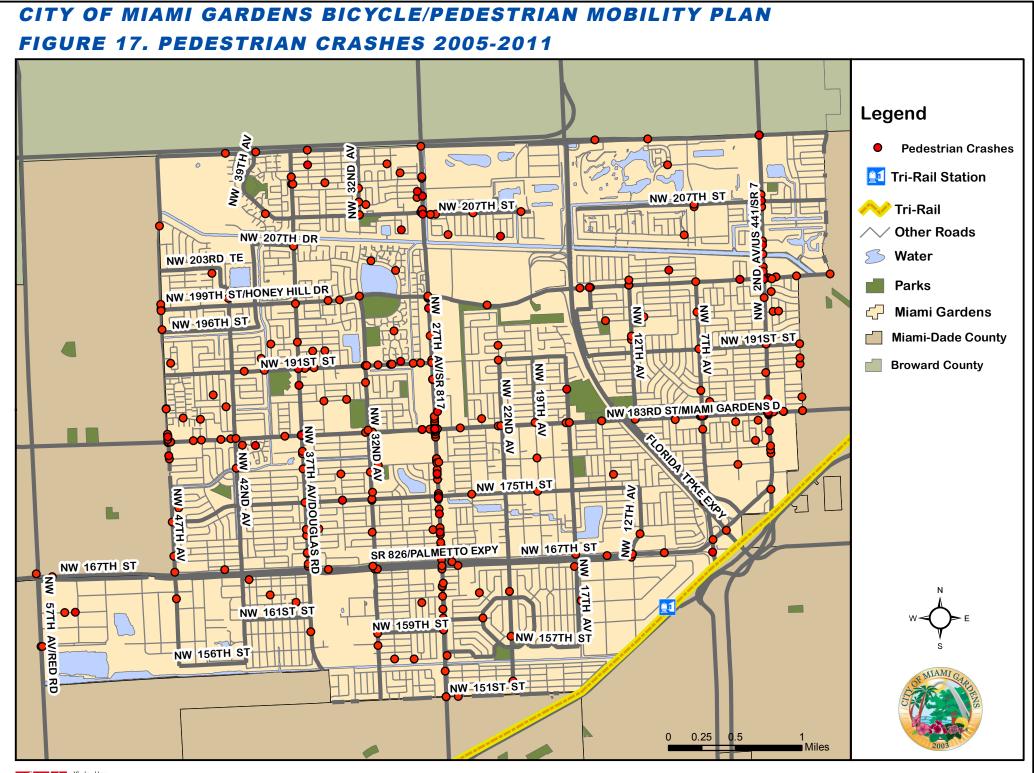

and pedestrian crashes within the City of Miami Gardens from 2005 to 2011. The Bicycle Crash Density Map shown in Figure 18 depicts the spread of bicycle-related crashes within Miami Gardens from 2005 to 2011. The darker clusters on the map show the areas with higher concentrations of bicycle-related crashes. Figure 19, the Pedestrian Crash Density Map, shows a similar pattern for the concentration of pedestrian-related crashes. Figure 20 depicts the density of bicycle and pedestrian crashes combined.

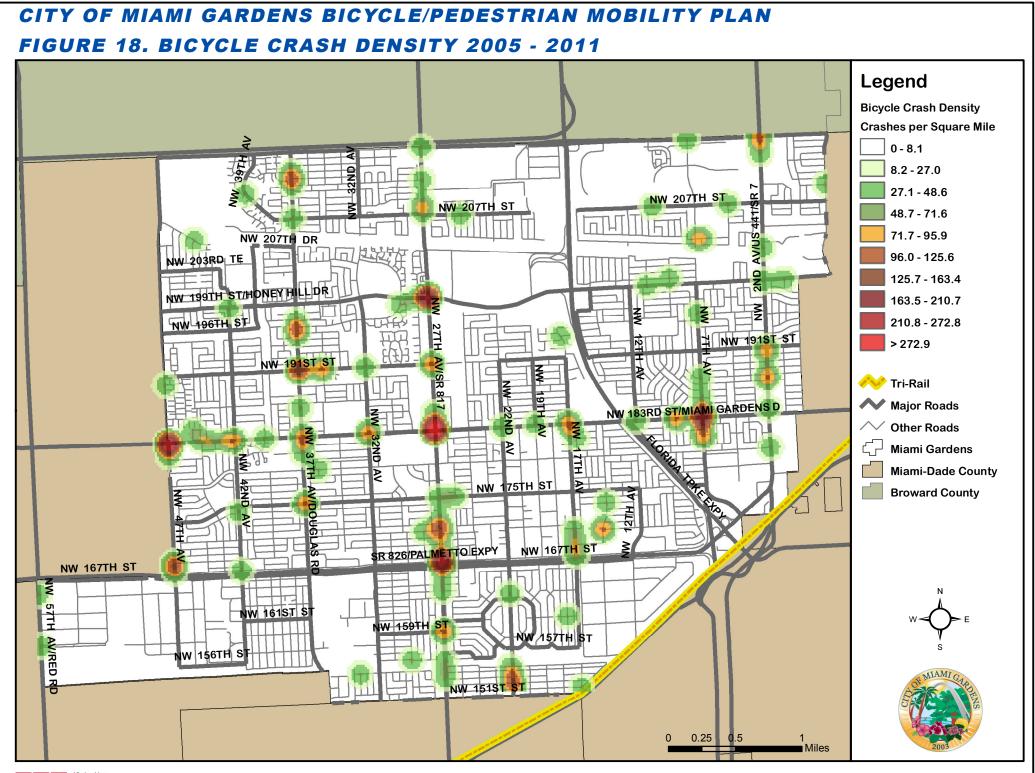

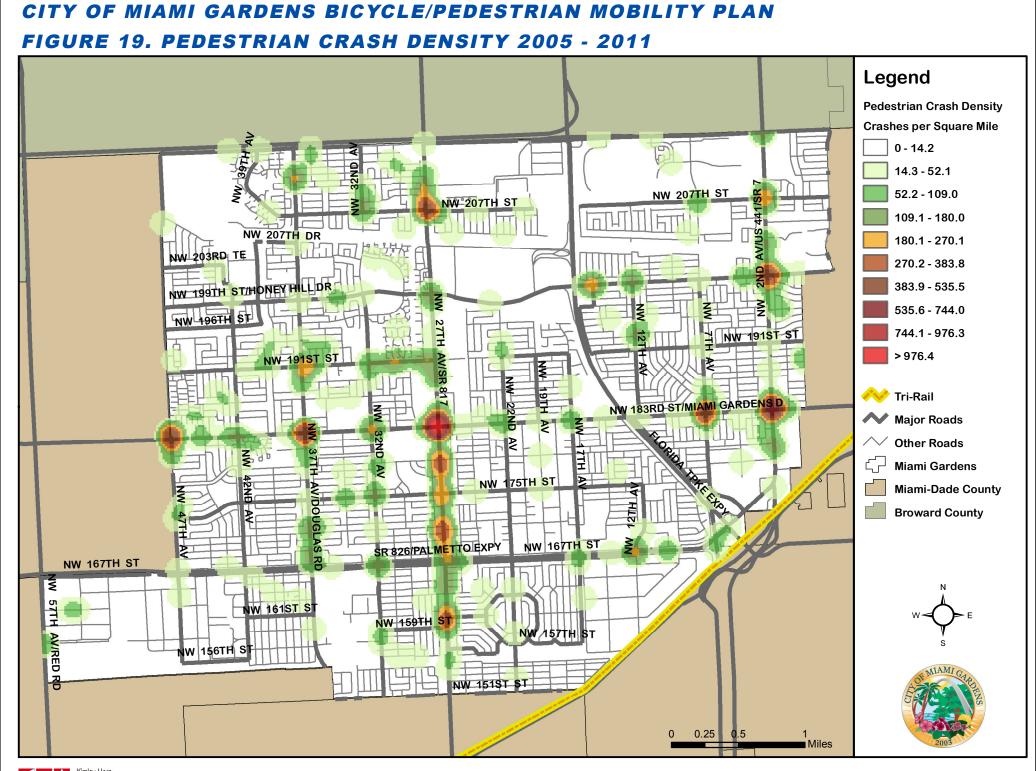

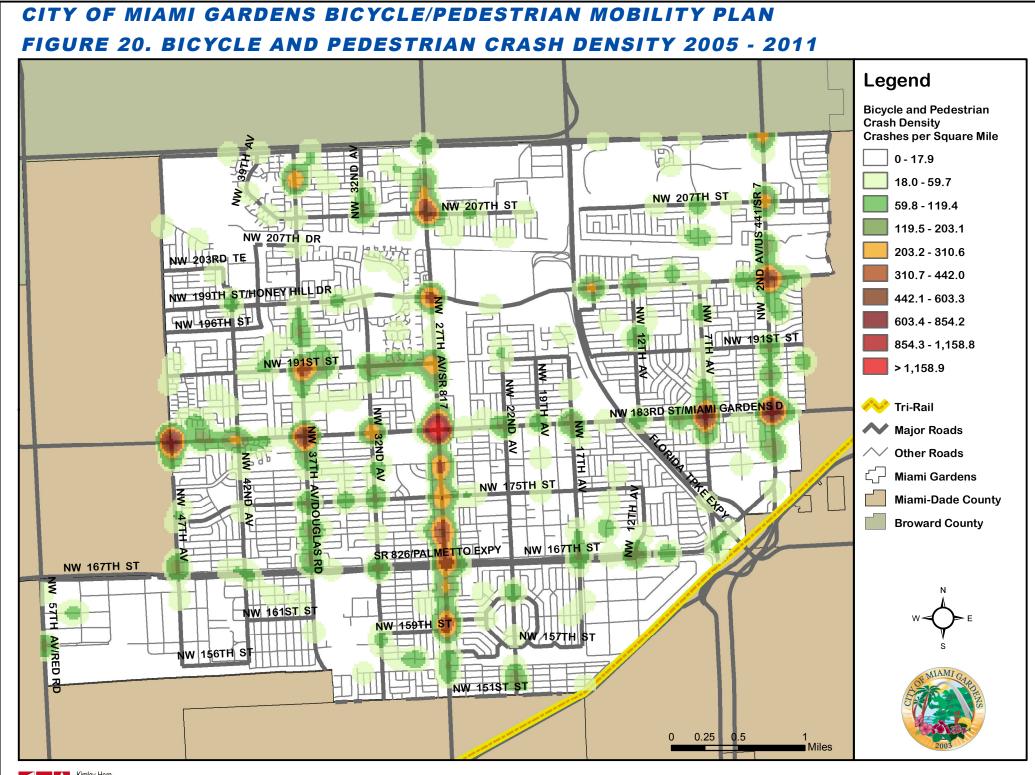

As seen in Figure 18, the bicycle-related crashes are concentrated along the major roadways within the City. The corridors with the highest occurrences of bicycle-related crashes are NW 27th Avenue and NW 183rd Street while the intersections with the highest occurrences of bicycle-related crashes are the intersections of NW 183rd Street and NW 27th Avenue; NW 183rd Street and NW 47th Avenue; and NW 183rd Street and NW 7th Avenue.

Figure 19 shows similar patterns for the concentration of pedestrian-related crashes. In addition to NW 27th Avenue and NW 183rd Street, the corridors of NW 2nd Avenue and NW 37th Avenue also possess high rates of pedestrian-related crashes. The intersections with the highest concentrations of pedestrian-related crashes are the intersections of NW 183rd Street and NW 27th Avenue; NW 183rd Street and NW 2nd Avenue; NW 183rd Street and NW 2nd Avenue; NW 183rd Street and NW 47th Avenue; NW 119th Street and NW 2nd Avenue; NW 183rd Street and NW 37th Avenue; NW 119th Street and NW 2nd Avenue; NW 183rd Street and NW 37th Avenue; NW 10th Street and NW 2nd Avenue; NW 183rd Street and NW 37th Avenue; NW 10th Street and NW 2nd Avenue; NW 183rd Street and NW 37th Avenue; NW 207th Street and NW 27th Avenue.

Public Meeting Results

On November 29, 2012 a public workshop was held to inform the citizens of Miami Gardens of the progress of the Bicycle and Pedestrian Mobility Plan and to solicit their

input on the plan and its workshop recommendations. The began with a presentation summarizing the plan's objectives, context for nonmotorized transportation within the City, completed study tasks, and descriptions of potential recommended improvements. The attendees were then asked to show their preferences

on different bicycle and pedestrian infrastructure improvements by voting for different infrastructure elements. The elements that received the most votes were bike lanes, crosswalks, lighting, multi-use trails, shading/trees, sidewalks, and traffic calming. Additionally, the attendees were given the opportunity to describe specific locations or situations that they have encountered that are in need of bicycle and pedestrian-related improvements and note the deficiency on a map of the City. One of major concerns

noted on this map was the need for a crosswalk on the north leg of the intersection of Miami Gardens Drive and NW 27th Avenue. All attendees were also given opportunity to write down the any comments about the plan, areas with specific need, or suggested improvements a comment sheet. Public meeting on

materials including the presentation and comment sheets are included in Appendix C.

Online Survey Results

In addition to quantitative data from the GIS database, pedestrian counts, and traffic crash data, an online survey was administered by City staff to obtain street users' perspective about the quality of existing bicycle and pedestrian conditions and usage. A total of 46 people responded to the online survey. The survey included qualitative and quantitative questions regarding the use of Miami Gardens streets for walking and bicycling.

One of the questions was to rank a set of bicycle-pedestrian amenities in order of importance (1 being the least important and 10 being the most important). The results indicate that sidewalks, crosswalks, and traffic signals are the most important elements for a pleasant trip experience. Table 9 shows the results of this survey question. Detailed survey results are included in Appendix D.

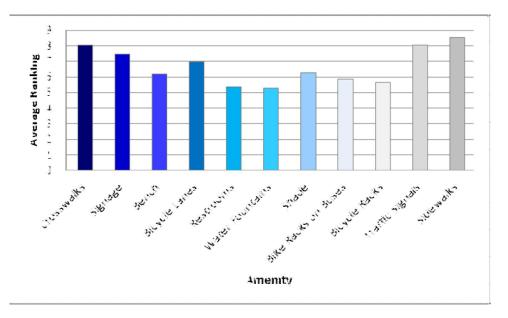

Table 9: Bicycle-Pedestrian Amenities Ranking

A sampling of quotes that survey respondents provided for open-ended questions can be found below.

"It would be great to get a shaded area to walk around the new city hall. I don't know if that is included but it will be a good way to increase the health of the employees."

"Helps me to get my 30 minutes of cardio in everyday."

"I do not bike because there is not enough space allowed for pedestrians and a biker."

"More attention must be given to sidewalks. Trees, foliage and cars are blocking the sidewalks."

"Sidewalks are available on busy streets."

"Sidewalks are in good condition."

Appendix D includes all of the additional written responses provided in the online survey.

GOALS AND OBJECTIVES

On August 3rd, 2012, the Steering Committee for the project met to identify the main goals and objectives for this Plan in consideration of the results of the Literature Review and Transportation Mobility Analysis. The goals discussed at that meeting are listed below.

- Provide bicycle and pedestrian access to the new City Hall that is under construction on the east side of NW 27th Avenue.
- Improve connectivity from the new City Hall to Dolphin Linear Park to promote active transportation and recreation.
- Create a connection between the Snake Creek Trail and Sun Life Stadium, potentially through coordinating with Florida's Turnpike Enterprise on their PD&E.
- Create a long-term project for a walking and bicycling connection to the Golden Glades Tri-Rail Station.
- Prioritize improvements near schools.
 - 18 elementary schools
 - 5 middle schools
 - 2 high schools
- Provide safety improvements near high-volume bus stops.
- Provide bicycle access to the Betty T. Ferguson Recreational Complex on NW 199th Street.
- Create more accessibility to the Dolphin Linear Park including wayfinding signs and potentially allowing bicycles during certain times of the day (commuting hours).
- Establish bike friendly business districts.

RECOMMENDED IMPROVEMENTS

Bicycle and pedestrian mobility recommendations were developed for the City of Miami Gardens based on input from the Steering Committee and the prior work tasks of this Plan, including the literature review, transportation mobility analysis, and the identification of goals and objectives. All improvements have been developed under an overarching principle to support and prioritize pedestrians and bicyclists within the City through use of context sensitive solutions (CSS) and complete streets principles as discussed in the Literature Review component of this report.

Project Listing

This Plan recommends the following improvement projects to promote safe and sustainable pedestrian and bicycle mobility within the City of Miami Gardens. Most of the Plan projects are capital improvement projects. Project descriptions, lead agencies, tasks, timeframes, implementation strategies, and generalized implementation cost levels for these projects are included below. Generalized implementation costs are identified by using dollar signs "\$" and ranging from lower cost "\$" to higher cost "\$\$\$\$." Table 13 on page 89 lists approximate costs of improvement items associated with the recommended projects. Photos, drawings, maps, and tables were developed or obtained from existing sources as necessary to provide further information and definition regarding the projects.

The capital projects represent the Engineering "E" of the League of American Bicyclists' "Five E" multimodal planning process. The remaining four "Es" each have individual recommendations summarized at the end of the Plan – Education, Encouragement, Enforcement, and Evaluation. The projects are organized as follows.

Area Wide Improvements

Project 1: Pedestrian Throughway Zone Project 2: Pedestrian Shade Corridors Project 3: Pedestrian Lighting Project 4: Pedestrian Signalization Improvements Project 5: Automated Pedestrian Detection Project 6: Bicycle Lanes Project 7: Bicycle Boulevard Corridors Project 8: Bike Boxes Project 9: High Density Bicycle Parking Project 10: Low-Speed Design Principles Project 11: Pedestrian Crossing Treatments Project 12: Pedestrian Mobility Improvements Project 13: Non-Motorized Trails Project 14: School-Related Improvements Project 15: Bus Stop Improvements Project 16: Bike Friendly Business Districts

Site-Specific Improvements

Project 17: New City Hall Access Project 18: City Hall and Dolphin Linear Park Connectivity Project 19: Snake Creek Trail and Sun Life Stadium Connectivity Project 20: Golden Glades Tri-Rail Station Access Project 21: Betty T. Ferguson Recreational Complex Access Project 22: Dolphin Linear Park Wayfinding

Non-Engineering Improvements

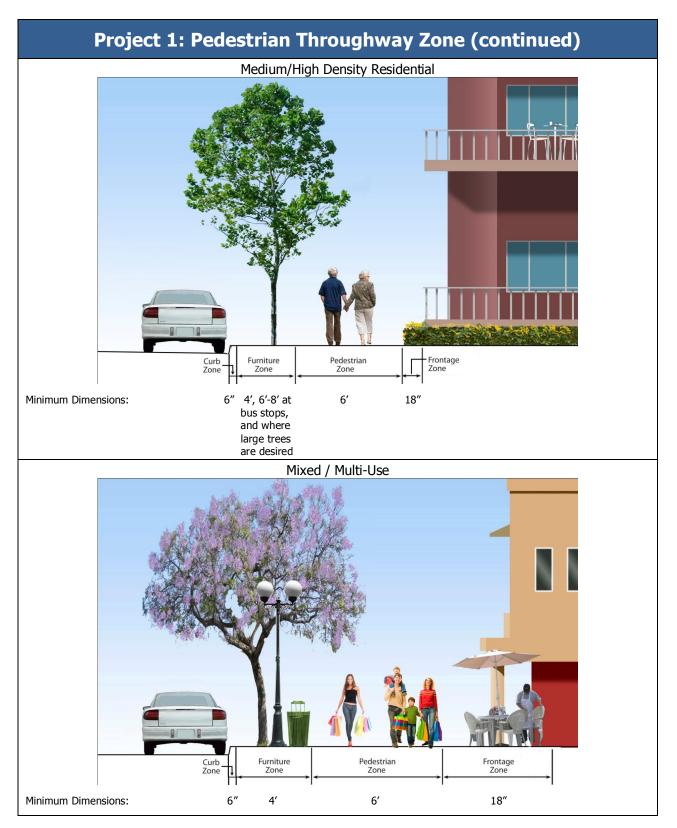

- Project 23: Education Improvements
- Project 24: Encouragement Improvements
- Project 25: Enforcement Improvements
- Project 26: Evaluation and Monitoring

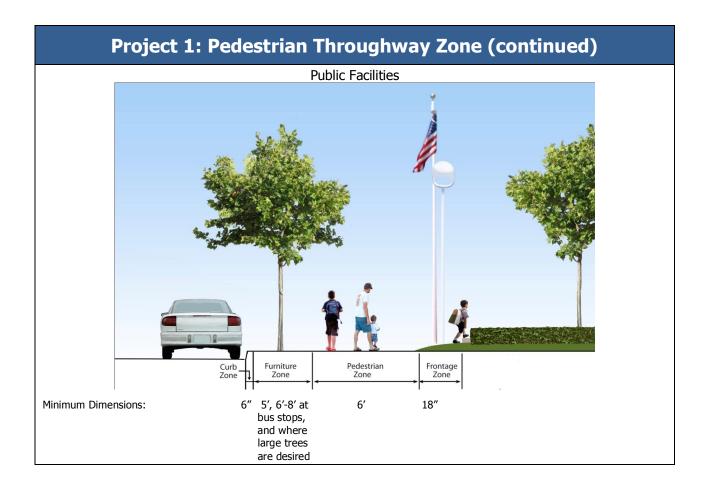

Project Description	As streets are redeveloped, relocate elements within the right-of-way
	(including but not limited to signage, lighting, trees, benches, and traffic signal devices) obstructing bicycle and pedestrians paths to establish a clear throughway pedestrian network throughout the City of Miami Gardens
Lead Agencies	City of Miami Gardens
Notes	 Clear pedestrian travel zones enhance the pedestrian environment and foster community life in residential and commercial districts A desired minimum pedestrian travel zone width of 6 feet should be provided in areas with active pedestrian activity For higher pedestrian volume areas, such as business districts and transit stations, additional width should be provided Trees, planting strips, utilities, traffic signal equipment, benches, water fountains, bicycle parking racks are examples of street furniture
Implementation Timeframe	Now (1-2 years)
Implementation Strategy	Implement as a component of any roadway improvement or beautification projects
Implementation Cost	\$
Low/Medium Density Residential	
$ \begin{array}{c} \hline \\ \hline \\ \hline \\ \hline \\ \hline \\ \hline \\ \hline \hline \\ \hline \hline \\ \hline \hline \hline \\ \hline \hline \hline \\ \hline \hline \hline \hline \hline \\ \hline \hline \hline \hline \hline \hline \\ \hline \hline$	

Project 2: Pedestrian Shade Corridors	
Project Description	Provide pedestrian shade corridors along heavily-walked thoroughfares
Lead Agencies	City of Miami Gardens and Miami-Dade County Public Works and Waste Management Department
Notes	 Urban environments with complete pedestrian corridors provide continuity and invite pedestrians to walk The main purpose of having a complete streetscape should be to provide pedestrians with a convenient and pleasant walking experience The City should invest in shade trees and other forms of shade providing structures as part of a complete package of pedestrian-related improvements
Tasks Involved	Include proposed improvements in Capital Improvements Program (CIP)
Implementation Timeframe	Now (1-2 years)Short Term (3-5 years)
Implementation Strategy	 Future CIP projects Coordinate with MDPWWM and FDOT to include in non- city projects
Implementation Cost	\$\$

Pedestrian shading can be provided through natural and synthetic techniques

Project 3: Pedestrian Lighting	
Project Description	Provide enhanced pedestrian lighting in key areas associated with bus stops, street advertising panels, areas of security concern, and high pedestrian visibility concerns
Lead Agencies	City of Miami Gardens and Miami-Dade County Public Works and Waste Management Department
Notes	 Urban environments with strategically placed lighting provide safe and inviting places to walk Solar powered lighting solutions can be utilized to contribute to a cleaner and greener Miami Gardens
Tasks Involved	Include proposed improvements in Capital Improvements Program (CIP)
Implementation Timeframe	Now (1-2 years)
Implementation Strategy	 Future CIP projects Coordinate with MDPWWM and FDOT to include in non-city projects
Implementation Cost	\$\$

Trail lighting scheme

Pedestrian level lighting

Solar Powered Street Light

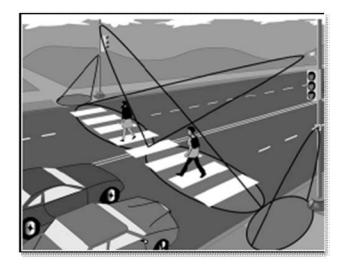

Project 4: Pedestrian Signalization Improvements	
Project Description	Modify signal operating plans to include proven pedestrian safety improvements, including leading pedestrian interval (LPI) and exclusive pedestrian phase
Lead Agencies	Miami-Dade County Public Works and Waste Management Department Traffic Engineering Division and Signals and Signs Division
Notes	 Leading Pedestrian Interval (LPI) reserves a pedestrian WALK phase for 2 to 5 seconds prior to the concurrent green phase for motor vehicles allows pedestrians to enter the crosswalk before turning motor vehicles attempt to cross their path Increases turning motorists' visibility of pedestrians Recommended for high-pedestrian activity areas Exclusive pedestrian phase, also known as "pedestrian scramble" provide a safer environment for pedestrians All traffic stops and pedestrians cross with no conflicts Diagonal crossing may be allowed Preferred where there are high volume turning movements
Tasks Involved	Install a leading pedestrian interval (LPI) at appropriate intersections within Miami Gardens beginning but not limited to the locations listed in Table 10
Implementation Timeframe	Now (1-2 years)
Implementation Strategy	Install as part of routine signal re-timing efforts or as part of the Advanced Traffic Management System (ATMS) migration
Implementation Cost	\$

Table 10: Leading Pedestrian Interval Improvements	
• NW 183 rd Street and NW 27 th Avenue	NW 183 rd Street and NW 2 nd Avenue
• NW 2 nd Avenue and NW 202 nd Terrace	NW 183 rd Street and NW 47 th Avenue
NW 27 th Avenue and NW 207 th Street	NW 183 rd Street and NW 37 th Avenue
• NW 183 rd Street and NW 7 th Avenue	NW 199 th Street and NW 2 nd Avenue

Project 5: Automated Pedestrian Detection	
Project Description	Install automated pedestrian detection systems at the signalized intersections listed in Table 10
Lead Agencies	Miami-Dade County Public Works and Waste Management Department Signals and Signs Division
Notes	 Automated pedestrian detectors are intelligent systems that automatically detect the presence of pedestrians Automated detection tends to result in faster service time for pedestrians, which may lead to increased compliance and enhanced safety (FHWA Report No. FHWA-RD-00-097) These systems can be used to extend crossing time for larger pedestrian platoons or slower moving pedestrians in a crosswalk
Tasks Involved	Coordinate with MDCPWD for signal equipment modifications
Implementation Timeframe	Short-term (3-5 years)
Implementation Strategy	Install as part of routine signal re-timing efforts or as part of the Advanced Traffic Management System (ATMS) migration
Implementation Cost	\$\$

Project 6: Bicycle Lanes	
Project Description	 Install bicycle lanes along: NW 42nd Avenue from NW 156th Street to NW 199th Street NW 37th Avenue from NW 183rd Street to NW 215th Street NW 32nd Avenue from NW 151st Street to NW 203rd Street NW 12th Avenue/NW 13th Avenue from NW 155th Terrace to NW 175th Street NW 175th Street from NW 47th Avenue to NW 12th Avenue
Lead Agencies	City of Miami Gardens, Miami-Dade County Public Works and Waste Management Department, Florida Department of Transportation
Notes	 Bicycle lane pavement markings designate the portion of the roadway for preferential use by bicyclists Markings inform all users of the restricted nature of the bicycle lane
Implementation Timeframe	Short Term (3-5 years) Long Term (5+ years)
Implementation Strategy	Implement as a component of roadway improvement or reconstruction projects on the indicated corridors
Implementation Cost	\$\$\$
72 inches 72 inches	

Project 7: Bicycle Boulevard Corridors		
Project Description	Implement bicycle boulevard design features along the following corridors: NW 191 st Street from NW 47 th Avenue to NW 27 th Avenue NW 191 st Street from NW 19 th Avenue to NW 17 th Avenue NW 22 nd Avenue from NW 183 rd Street to NW 195 th Street NW 19 th Avenue from NW 191 st Street to NW 195 th Street NW 17 th Avenue from NW 175 th Street to NW 191 st Street NW 14 th Avenue from NW 175 th Street to NW 183 rd Street NW 7 th Avenue from NW 175 th Street to NW 183 rd Street	
Lead Agencies	City of Miami Gardens, Miami-Dade County Public Works and Waste Management Department, Florida Department of Transportation	
Notes	 Improves bicycle safety, convenience, and connectivity Calms traffic and helps to remove non-local vehicles from the street Requires low motor vehicle speeds and volumes Include signage and pavement markings (examples shown below) 	
Timeframe	Short Term (3-5 years)	
Implementation Strategy	Future CIP projects and as a component of roadway improvement projects on the indicated corridors	
Implementation Cost	\$\$

	Project 8: Bike Boxes
Project Description	As bicycle lanes are installed along the corresponding corridors, add bike boxes to the following intersections: • NW 175 th Street and NW 42 nd Avenue • NW 175 th Street and NW 32 nd Avenue • NW 175 th Street and NW 22 nd Avenue • NW 175 th Street and NW 12 th Avenue
Lead Agencies	City of Miami Gardens, Miami-Dade County, Florida Department of Transportation, Miami-Dade MPO, Miami-Dade County Public Works and Waste Management Department
Notes	 Cyclists pass through an intersecting first during a green signal phase rather than queuing behind motor vehicles Reduces right-hook incidents Motorists are alerted by the bike box at the intersection For use at signalized intersections with high cyclist volumes Requires FHWA Request to Experiment See Figure 21 for conceptual bike box design
Timeframe	Short Term (3-5 years)
Implementation Strategy	 Coordinate with MPO and MDPWWM regarding FHWA Request to Experiment Future CIP projects and as a component of roadway improvement projects on the indicated corridors as bike lanes are constructed
Implementation Cost	\$\$

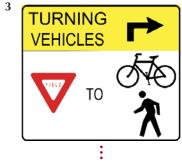

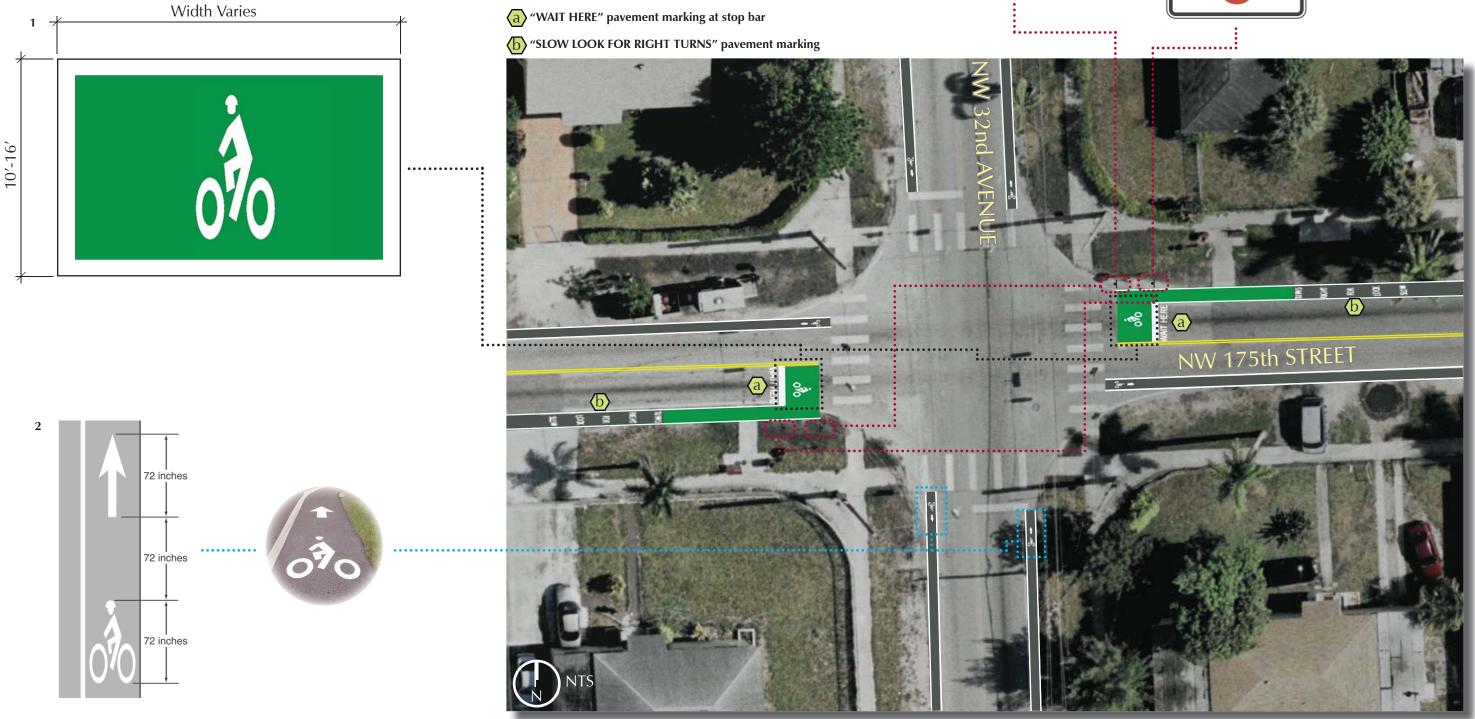

Intera Die De From NACTO Urban Bikeway Design Guide

Figure 21. Conceptual Bike Box Design NW 32nd Avenue & NW 175th Street Miami, Florida | USA

1. Bike Box

A Bike Box should be installed to provide bicyclists with a safe and visible way to get ahead of queuing traffic during the red signal phase.

2. Bike Lane Marking

Bike lane pavement markings designate the portion of the roadway for preferen-tial use by bicyclists. Markings inform all road users of the restricted nature of the bicycle lane.

3. R10-15 Street Sign

A "Turning Vehicles Yield" sign shall be installed to alert motorists of the potential for conflicts with bicycles and pedestrians.

4. R10-11 Street Sign

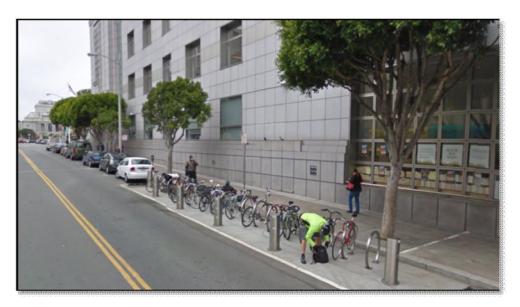

A "No Turn On Red" sign should be post mounted to prevent vehicles from entering the bike box.

Kimley-Horn and Associates, Inc.

Project 9: High Density Bicycle Parking		
Project Description	 Install high-density bicycle parking improvements at the following locations: The new City Hall North Dade Regional Library Betty T. Ferguson Community Center Future livable communities development projects 	
Lead Agencies	City of Miami Gardens and Miami-Dade County Public Works and Waste Management Department	
Tasks Involved	Include proposed improvements in Capital Improvements Program (CIP)	
Implementation Timeframe	Now (1-2 years)	
Implementation Strategy	Bike corrals can be implemented in the proper furniture zone as part of curb bulb-out projects	
Implementation Cost	\$	

Example of bicycle parking corral in San Francisco, CA Note: Design could be improved with concrete curbs

Pr	oject 10: Low-Speed Design Principles
Project Description	As streets are redesigned, reconstructed, and redeveloped, use low- speed design principles to achieve lower speeds through techniques such as smaller corner radii, pedestrian bulb-outs, traffic circles that accommodate bicycles and pedestrians, and utilizing traffic calming devices where appropriate. Additionally, perceptual design features such as patterns painted, stamped, or built into the roadway surface encourage motorists to reduce speeds.
Lead Agencies	City of Miami Gardens, Miami-Dade County Public Works and Waste Management Department
Notes	 A general recommendation for most neighborhood streets would be to design for no more than 30 miles per hour; however, each street would need to be evaluated on a case-by-case basis Roadway safety statistics underscore the need to promote low speeds within high pedestrian areas The likelihood of a pedestrian surviving a crash with a motor vehicle significantly increases as the vehicular speed at impact decreases
Tasks Involved	Promote the use of low-speed design techniques within the engineering community
Implementation Timeframe	Now (1-2 years)
Implementation Strategy	All applicable engineering projects within the City
Implementation Cost	\$\$

Project 16: Bike Friendly Business Districts			
Project Description	Bike friendly business districts encourage citizens to bike to shops and restaurants through promotion and by providing bicycle amenities such as bike racks, bike lanes, bike valets, and discount programs for bicyclists		
Lead Agencies	City of Miami Gardens		
Notes	 Businesses in areas where bike lanes and bike racks have been installed have seen substantial increases in sales after the installations Increased bicycle use in business districts increases social interaction and public safety Due to their lower speeds, bicyclists are more likely to notice the businesses they pass Increased bicycle use reduces the need for additional car parking 		
Implementation Timeframe	Now (1-2 years)		
Implementation Strategy	Coordinate with local businesses, commercial areas, and bicycle advocacy groups to form bike friendly business districts		
Implementation Cost	\$		

_	Project 17: New City Hall Access
Project Description	Provide bicycle and pedestrian access to the new City Hall that is under construction on the east side of NW 27 th Avenue.
Lead Agencies	City of Miami Gardens
Notes	 Include sidewalks to and throughout the site for pedestrian access Include bike parking facilities on site Include wayfinding signage directing bicyclists to City hall along the proposed bicycle boulevard (Project 7) along NW 191st Street
Implementation Timeframe	Now (1-2 years): sidewalks and bike parking Short term (3-5 years): bicycle boulevard and wayfinding signage
Implementation Strategy	Implement as part of the construction of the new City Hall
Implementation Cost	\$\$

Project 18: City Hall and Dolphin Linear Park Connectivity											
Project Description	Improve connectivity from the new City Hall to Dolphin Linear Park to promote active transportation and recreation.										
Lead Agencies	City of Miami Gardens, SunLife Stadium, Miami-Dade County										
Notes	 The new City Hall is just west of Dolphin Linear Park This connection would link the neighborhoods to the east of Dolphin Linear Park to the new City Hall and to the neighborhoods to the west This becomes a connection link within the broader network of shared-use paths within the City Dolphin Linear Park is maintained by the Stadium 										
Implementation Timeframe	Short Term (3-5 years)										
Implementation Strategy	 Future CIP project Incorporate into the development of the new City Hall site/other associated development west of Dolphin Linear Park 										
Implementation Cost	\$\$\$										
Claure Cl	TWV 195th										

Project 19: Snake Creek Trail and Sun Life Stadium Connectivity											
Project Description	Create a connection between the Snake Creek Trail and Sun Life Stadium										
Lead Agencies	City of Miami Gardens, Sun Life Stadium, Miami-Dade County, Florida's Turnpike Enterprise										
Notes	Include an underpass at the Turnpike as part of the trail connection										
Implementation Timeframe	Long Term (5+ years)										
Implementation Strategy	Coordinate with Florida's Turnpike Enterprise during the PD&E Study in order to incorporate the connection under the Turnpike bridge on the south side of the Snake Creek Canal bank and connect to existing trail										
Implementation Cost	\$\$\$\$										

Project	20: Golden Glades Tri-Rail Station Access									
Project Description	Create a walking and bicycling connection from the City of Miami Gardens to the Golden Glades Tri-Rail Station									
Lead Agencies	City of Miami Gardens, Florida Department of Transportation, South Florida Regional Transportation Authority									
Notes	 Providing access to the Tri-Rail station via a shared-use path connected to recommended bike lanes and bicycle boulevard can link the transit hub to the nearby industrial area and further into the City A Project Development and Environment (PD&E) Study for the Golden Glades Interchange is currently being conducted by FDOT District 6 									
Implementation Timeframe	Long Term (5+ years)									
Implementation Strategy	Coordinate with FDOT and SFRTA to implement the recommended shared use path as part of the PD&E build alternative construction									
Implementation Cost	\$\$\$\$									
TH ST	NW 183RD ST Recommended Improvements Bicycle Lanes Bicycle Boulevard Shared Use Path Shared Use Path N H H N H H Bicycle Access to Golden Glades Tri-Rail Station									

Project 21: E	Betty T. Ferguson Recreational Complex Access
Project Description	Provide bicycle access to the Betty T. Ferguson Recreational Complex on NW 199th Street.
Lead Agencies	City of Miami Gardens
Notes	 Include bike parking facilities on site Include wayfinding signage directing bicyclists to City hall along the proposed bike lane (Project 6) along NW 32nd Avenue and along the proposed bicycle boulevard (Project 7) along NW 191st Street
Implementation Timeframe	Now (1-2 years): bike parking Short term (3-5 years): bike lane, bicycle boulevard and wayfinding signage
Implementation Strategy	Future CIP projects
Implementation Cost	\$\$

Project 22: Dolphin Linear Park Wayfinding											
Project Description	Facilitate linkages between the Dolphin Linear Park and nearby destinations by providing wayfinding signage.										
Lead Agencies	City of Miami Gardens, SunLife Stadium, Miami-Dade County										
Notes	 Provide wayfinding signs along the linear park for the following destinations: North Dade Regional Library The new City Hall Trail ends Crestview Elementary School Future Rolling Oaks Trail Future Mid-Town Blueway Trail Note: Dolphin Linear Park is maintained by the Stadium 										
Implementation Timeframe	Now (1-2 years): existing destinations Short Term (3-5 years): future proposed destinations										
Implementation Strategy	Future CIP project										
Implementation Cost	\$										
	<complex-block></complex-block>										

Pr	oject 23: Education Improvements										
Project Description	 The objective of the education improvements are to promote the concept of mobility within Miami Gardens to the general public in order to get more people walking and biking safely Provide educational pamphlets and workshops about the use o new facilities such as bicycle-activated signals, bicycle lanes, sharrows, crosswalks, and un-signalized mid-block crossings. Make use of the City's existing Safety Town setup Educate the Miami Gardens Police force utilizing the Florida Bicycle Law Enforcement Guide and the Bicycle Law Enforcement Video to enhance enforcement. Work with the Miami-Dade School Board to include safe bicycling and walking classes in Elementary School curricula. Work with the Florida Bicycle Association to implement education initiatives in Miami Gardens. <i>Cycling Savvy</i> includes three 3-hour components to help turn casual bicyclists into more confident riders. <i>Alternative Transportation Education</i> (ATE) educates offenders with revoked or suspended driver licenses on bicycling and walking safety, and has shown proven results in increasing safe use of alternative modes 										
Lead Agencies	City of Miami Gardens, Miami-Dade MPO, Miami-Dade County										
Implementation Cost	\$										
	Examples of Educational Pamphlets										
<section-header></section-header>	<section-header><section-header></section-header></section-header>										

Proje	ct 24: Encouragement Improvements
Project Description	 Work with local non-profit organizations to organize community events that would promote safely walking in Miami Gardens during evening hours. Work with local bicycle clubs and advocacy groups to support and organize bicycle-related community events in Miami Gardens to act as an information source for bicyclists. Mandate bicycle parking improvements as part of any new development per City of Miami Gardens Code. Promote bicycle amenities such as bicycle parking racks, bicycle transport racks, lockers, and showers at workplaces. The availability of workplace amenities encourages bicycle commuting by providing facilities that allow employees to maintain a professional appearance. Work with the Miami Dolphins to promote bicycle events within the City as part of their Dolphins Cycling Challenge Install bike barometers/counters on shared-use paths and trails to raise awareness of cycling and encourage more bicyclists to use the paths
Lead Agencies	City of Miami Gardens, Miami-Dade County, Health Advocacy Groups, Non-profits, Bicycle clubs
Implementation Cost	\$

Open Streets event on State Street in Chicago, IL

Project 25: Enforcement Improvements											
Project Description	 Utilize targeted enforcement for both motorists and non-motorists to ensure that the rights of both groups are respected. Expand the use of police on bicycles. Develop a bicycle registration program to reduce theft. Enforce citizen warnings to pedestrians not following safe walking protocol. Promote the Ride Right, Drive Right campaign to enforce the 3-feet separation law between motorists and bicyclists. Install bicycle activated detectors on low volume side street approaches to signalized intersections to reduce occurrences of bicyclists having to violate a red light. Gradually install them along all significant bicycle corridors and crossings. Monitor the installation of bicycle activated detectors to study the effect on bicyclists who have violated the vehicle code on their bicycle, with the purpose of teaching safe bicycling practices. Enforcement improvements provide a better environment for pedestrians and bicyclists in Miami Gardens 										
Lead Agencies	City of Miami Gardens, Miami-Dade County

Pro	oject 26: Evaluation and Monitoring
Project Description	 Conduct a periodic online survey to gauge the quality of the pedestrian experience in Miami Gardens and measure change over time in the perceived safety and pleasantness of the pedestrian environment using the survey included in this project as an established baseline. Evaluate the change in pedestrian and bicycle volume over time by continuing the count program in the general vicinity of the counts conducted for this study. Document improvements implemented between counts to assess their impact.
Lead Agencies	City of Miami Gardens, Miami-Dade MPO

SUMMARY

The Bicycle and Pedestrian Mobility Plan for the City of Miami Gardens develops and recommends projects to help implement the City's goals related to bicycle and pedestrian mobility. A focus was placed on developing projects that will connect the city's activity centers, neighborhoods, and community facilities while incorporating existing plans and public input and participation. The Recommendations section of this report groups the bicycling and walking initiatives into 26 Projects that when taken as a comprehensive whole will increase the safety and mobility of the residents and visitors of Miami Gardens for years to come. Figure 22 depicts the existing, planned and recommended bicycle and pedestrian facilities within the City of Miami Gardens.

#### **APPENDIX C**

#### **PUBLIC MEETING MATERIALS**

Public Workshop November 29, 2012

### BICYCLE AND PEDESTRIAN MOBILITY PLAN for the City of Miami Gardens

2003 2003 Entropolition

Kimley-Horn and Associates, Inc.

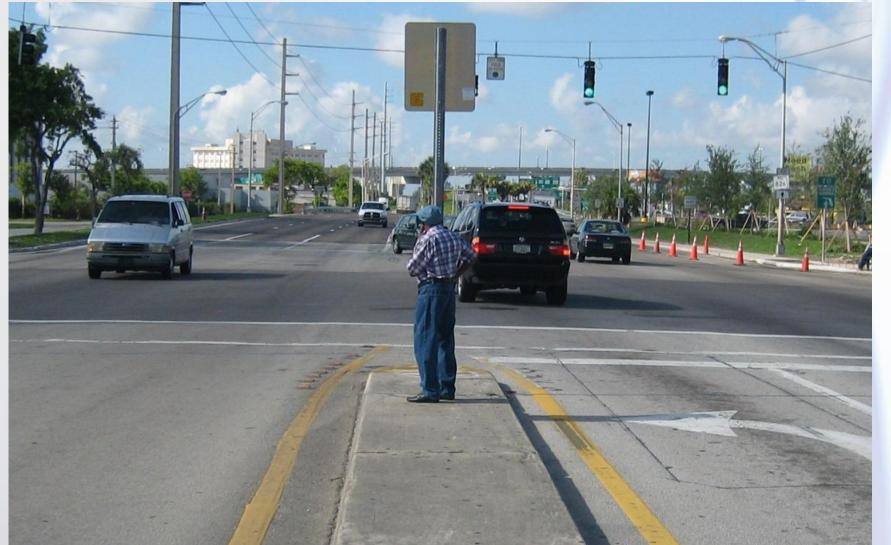

## Plan Objectives

- Enhance the city-wide bicycle/pedestrian safety network
- Provide bicycle facilities and amenities for use as a method of transportation
- Improve traffic flow and safety for intermodal transportation
- Refine goals as identified in the City's Transportation Element of the Comprehensive Development Master Plan

## Context

- Benefits of enhancing non-motorized transportation mobility and accessibility in Miami Gardens:
  - Connects the City's activity centers, neighborhoods, and community facilities
  - Invites residents to patronize local businesses, walk or bike to work and school, and access public transportation for longer trips

 Achieves important sustainability, health, and recreation goals

## Study Approach Background Research

- Steering Committee
- Public Involvement
- Data Collection and Analysis
- Problem Identification
- Recommendations
- Final Report and Dissemination

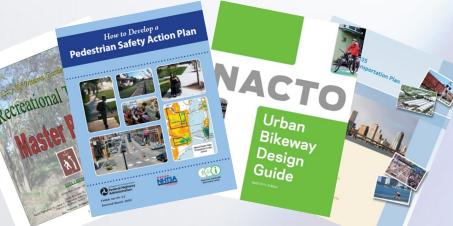

### Background

- National Household Travel Survey
- ▶ U.S. Census Journey-to-Work Data
- Florida Department of Transportation Work Program
- Miami-Dade MPO Transportation Improvement Program (TIP)
- Miami-Dade MPO 2035 Long Range Transportation Plan (LRTP)
- USDOT Complete Streets

- Context Sensitive Solutions
- NACTO Urban Bikeway Design Guide
- FHWA's How to Develop a Pedestrian Safety Action Plan
- City of Miami Gardens Recreational Trails Master Plan
- State Road 7 Livable Communities Corridor Study
- City of Miami Gardens Roadway Assessment Report

## Background

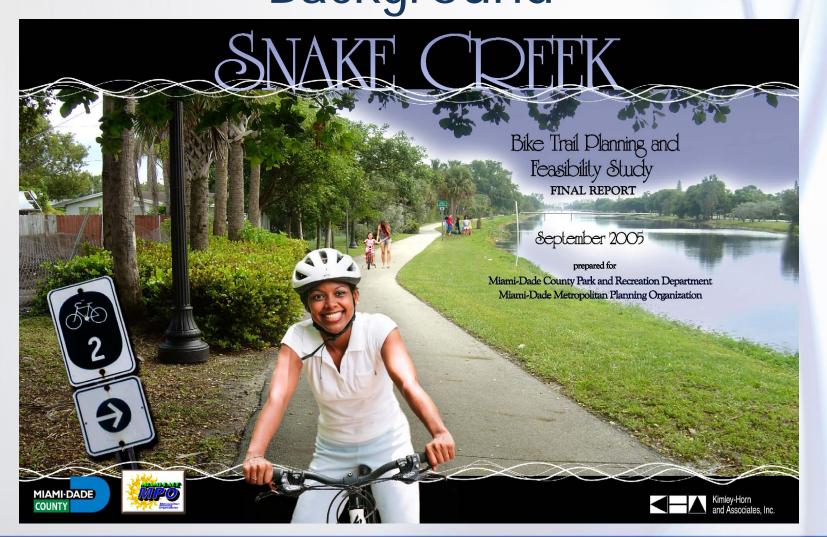

- National Household Travel Survey (2009)
  - Nearly ½ of all trips are less than 3 miles
  - Approximately 28% of all trips are less than 1 mile
  - Less than 1% of all trips are made by bicycle

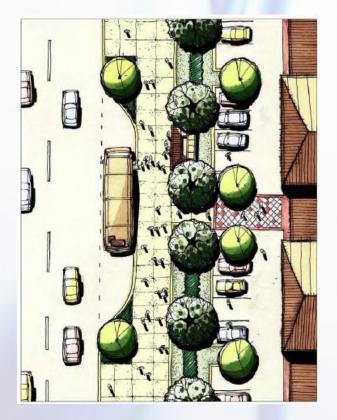

## Background

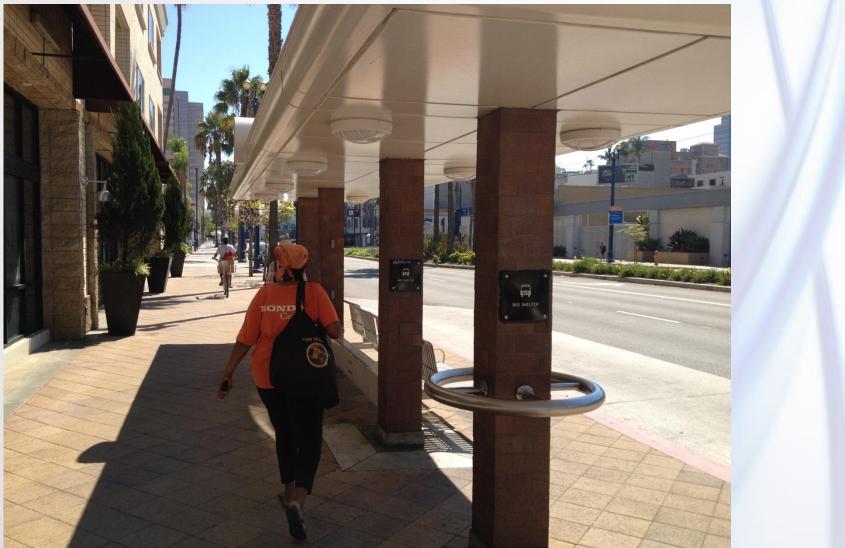

### S.R. 7 Livable Communities Corridor Study

- Defined improvements to S.R. 7 to enhance:
  - Mobility
  - Safety
  - Quality of Life
- Final recommendations included:
  - 19-foot frontage buffer
  - Mixed-use development
  - Gateway treatment at the ends of the corridor
  - Bus bays at several bus stops
  - Landscaping
  - Traffic signal coordination
  - Commercial driveway consolidation

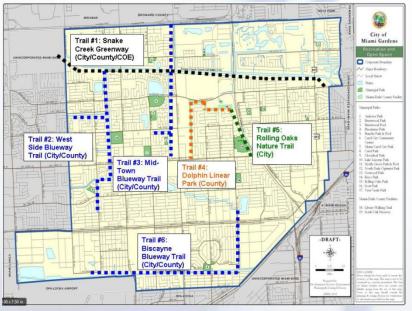

## Background

- City of Miami Gardens Recreational Trails Master Plan
  - Identifies six proposed trails:
    - #1: Snake Creek Canal Greenway Trail Corridor
    - #2: West Side Blueway Trail
    - #3: Mid-Town Blueway Trail
    - #4: Dolphin Center Park Walking Trail
    - #5: Biscayne Blueway Trail
    - #6: Rolling Oaks Nature Trail

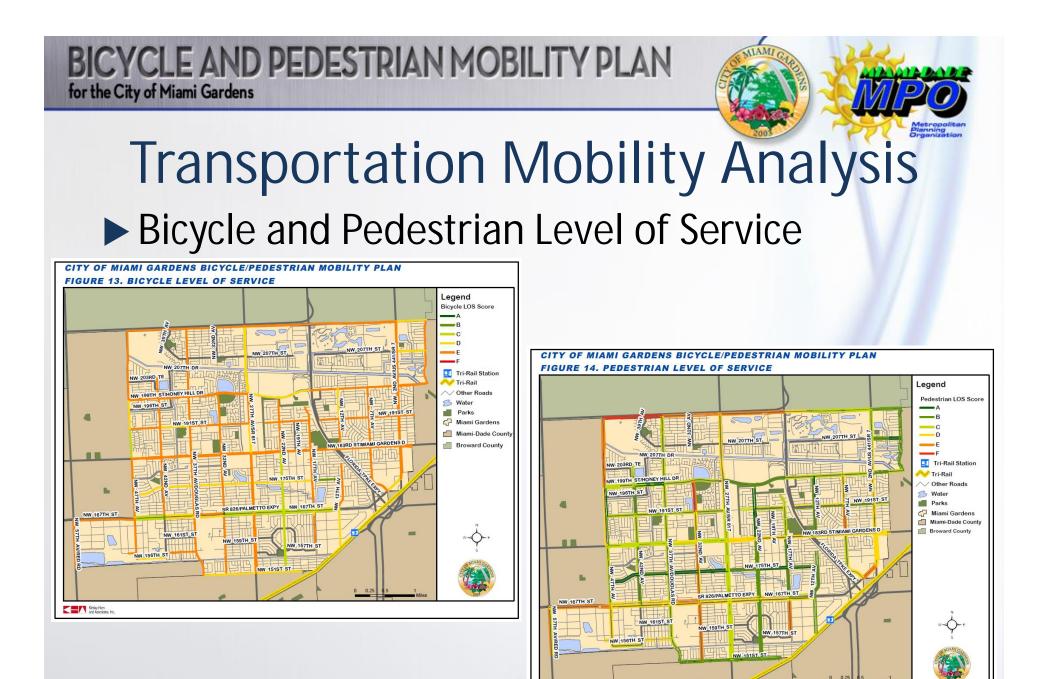

# Transportation Mobility Analysis Field Observations

- Pedestrian corridors meet minimum standards, not context sensitive
- Unmarked crossings at major intersections
- Long blocks on major corridors long distances between marked crosswalks
- Many bus stops without adequate crosswalks nearby
- High occurrence of improvised bicycle parking
- Florida's Turnpike forms a significant barrier to east-west flow
- Low level of connectivity between the City and the Golden Glades Tri-Rail Station

Kiniey-Hom and Associates, In

# Transportation Mobility Analysis Online Survey Results

BICYCLE AND PEDESTRIAN MOBILITY PLAN for the City of Miami Gardens
Transportation Mobility Analysis
• Online Survey Results If would be great to get a shaded area to walk around the new city hall. I don't know if that is included but it will be a good way to increase the health of the employees." If whet here to get my 30 minutes of cardio in everyday." If do not bike because there is not enough space allowed for pedestrians and a biker."
"More attention must be given to sidewalks. Trees, foliage and cars are blocking the sidewalks." "Sidewalks are available on busy streets."
25

### Goals & Objectives/Problem Identification

- Provide bicycle and pedestrian access to the new City Hall that is under construction on the east side of NW 27th Avenue.
- Improve connectivity from the new City Hall to Dolphin Linear Park to promote active transportation and recreation.
- Create a connection between the Snake Creek Trail and Sun Life Stadium, potentially through coordinating with Florida's Turnpike Enterprise on their PD&E.
- Create a long-term project for a walking and bicycling connection to the Golden Glades Tri-Rail Station.

### Goals & Objectives/Problem Identification

- Prioritize improvements near schools.
  - 18 elementary schools
  - 5 middle schools
  - 2 high schools
- Provide safety improvements near high-volume bus stops.
- Provide bicycle access to the Betty T. Ferguson Recreational Complex on NW 199th Street.
- Create more accessibility to the Dolphin Linear Park.
  - Provide wayfinding signs
  - Add more parking
  - Allow bicycles, potentially during certain times of the day (commuting hours)
- Establish bike friendly business districts.

### **Recommended Improvement Categories**

- Area Wide Improvements
- Site-Specific Improvements
- Non-Engineering Improvements

## Area Wide Improvements

- Bus Stop Improvements
  - Safety improvements
     near high-volume bus
     stops
  - Ensure that the stops have adequate:
    - Sidewalk connectivity
    - Roadway crossing treatments
    - Signage

### Area Wide Improvements

At Signalized Intersections – X-Walk on All Approaches

# Area Wide Improvements At Unsignalized Intersections < 12,000 AADT</li>

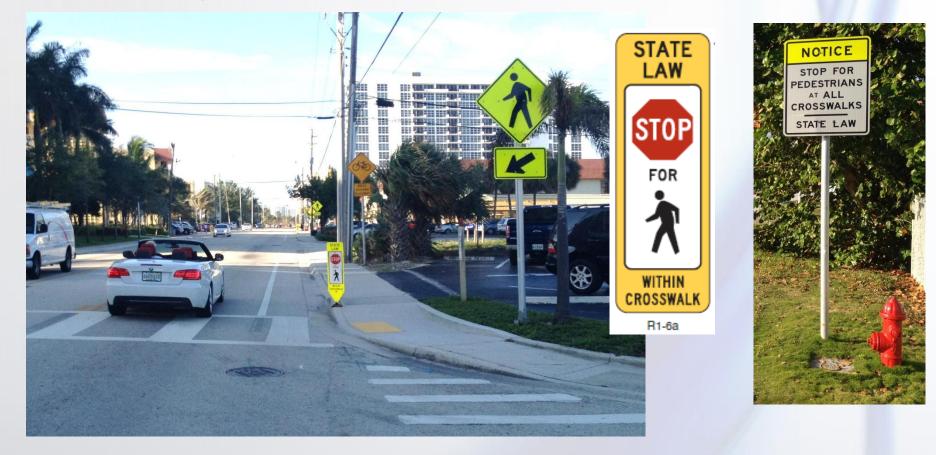

### Area Wide Improvements

At Unsignalized Intersections > 12,000 AADT

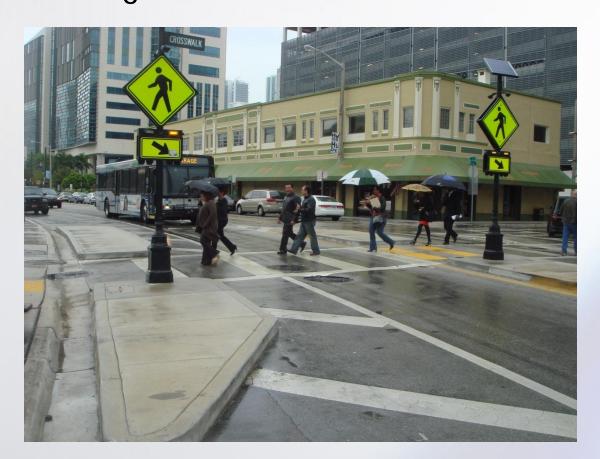

# Area Wide Improvements At Unsignalized Intersections > 12,000 AADT

### Area Wide Improvements

- Pedestrian Mobility Improvements
  - Add new curb ramps, pedestrian crosswalks, curb extensions
  - Enhance existing curb ramps to meet ADA conditions
  - Enhance existing pedestrian crosswalks to improve visibility

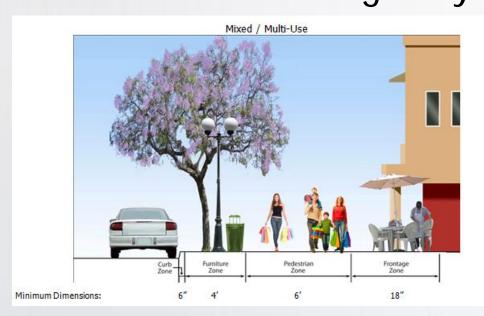

# Area Wide Improvements Pedestrian Throughway Zone

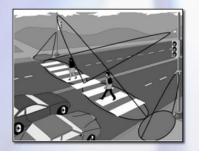

### Area Wide Improvements

- Pedestrian Improvements
  - Shade Corridors
    - Provide shade along heavily walked thoroughfares
  - Pedestrian Lighting
    - Bus stops
    - Street advertising panels
    - Areas of security and visibility concern
  - Automated Pedestrian Detection
    - Automatically detect the presence of pedestrians

### Area Wide Improvements

- Bike Friendly Business Districts
  - Encourage citizens to bike to shops and restaurants
    - Promotion
    - Provide bicycle amenities
      - bike racks
      - bike lanes
      - bike valets
      - discount programs for bicyclists

Bicycle Facility Improvements

– Bike Lanes

# Area Wide Improvements Bicycle Facility Improvements Bike Boxes

### Area Wide Improvements

Bicycle Facility Improvements
 Bicycle Boulevards

SHARE

W11-

W16-1P

Note: The Bicycle Boulevard signage must be integrated within the County's Wayfinding signage program and bicycle route numbering system.

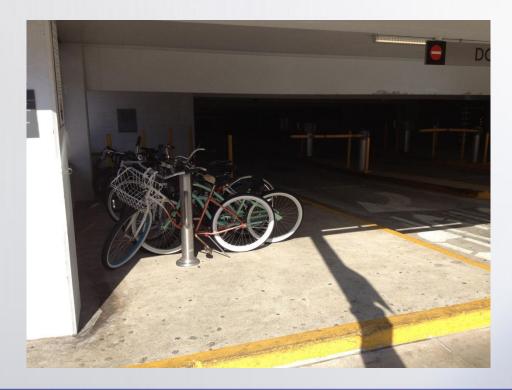

### Area Wide Improvements

Bicycle Facility Improvements
 Bike Corrals

### Area Wide Improvements

- Low-Speed Design Principles
  - As streets are redesigned, reconstructed, and redeveloped
  - Achieve lower speeds through:
    - smaller corner radii
    - pedestrian bulb-outs
    - traffic circles that accommodate bicycles and pedestrians
    - traffic calming devices
    - patterns painted, stamped, or built into the roadway surface

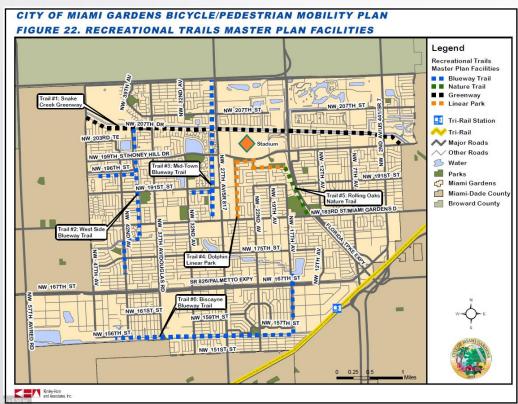

### Area Wide Improvements

### Non-Motorized Trails

Implementation of the 6 proposed trails identified by the RTMP

### Site-Specific Improvements

- Bicycle and Pedestrian Access
  - New City Hall

Golden Glades Tri-Rail Station
 Access

Betty T. Ferguson Recreation
 Complex

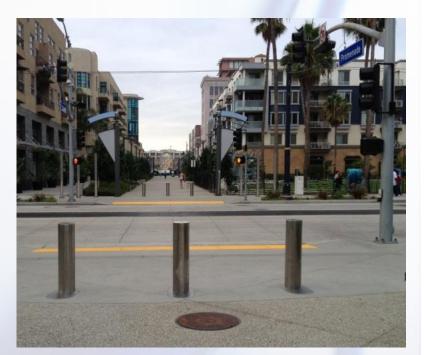

### Site-Specific Improvements

Connectivity Improvements

 City Hall and Dolphin Linear Park

### Site-Specific Improvements

Connectivity Improvements – Snake Creek Trail and SunLife Stadium

### Non-Engineering Improvements

- Education Improvements
  - Pamphlets and workshops about bicycle and pedestrian safety and the use of new facilities

Walking is fun!

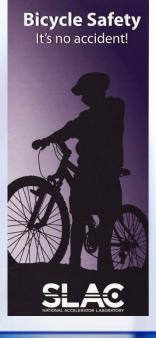

It's free and it's great exercise. You can walk almost anywhere you want to go. However, what's not fun is getting hil by a motor vehicle while walking.

Inside you will find tips to help keep you safe while walking and tips to help drivers interact safely with pedestrians. Get Behind It THE BIKE BOX

### Non-Engineering Improvements

- Encouragement Improvements
  - Community events that promote safe walking and biking
  - Work with local bicycle clubs and advocacy groups
  - Incentives for bicycle parking improvements as part of any new development per City of Miami Gardens Code
  - Promote bicycle amenities such as bicycle parking racks, lockers, and showers at workplaces

### Non-Engineering Improvements

- Enforcement Improvements
  - Utilize targeted enforcement for both motorists and non-motorists
  - Expand the use of police on bicycles.
  - Develop a bicycle registration program to reduce theft.
  - Promote the Ride Right, Drive Right campaign to enforce the 3-feet separation law between motorists and bicyclists.
  - Enforce citizen warnings to pedestrians not following safe walking protocol.
  - Develop a "bicycle traffic school" program for adult cyclists who have violated the vehicle code on their bicycle, with the purpose of teaching safe bicycling practices.

### Non-Engineering Improvements

- Evaluation and Monitoring
  - Conduct an annual online survey
    - Gauge the quality of the pedestrian experience in Miami Gardens
    - Measure change over time in the perceived safety and pleasantness of the pedestrian environment
  - Pedestrian and Bicycle Counts
    - Evaluate the change in volumes over time
    - Document improvements implemented between counts to assess the impact of these improvements

### Today's Workshop

- Menu of Bicycle/Pedestrian Infrastructure Options
  - Benches

– Bicycle Racks

- Bicycle Racks on Buses

– Bike Lanes

### Today's Workshop

- Menu of Bicycle/Pedestrian Infrastructure Options
  - Bus Shelters

- Crosswalks

### – Multi-Use Trails

### Today's Workshop

- Menu of Bicycle/Pedestrian Infrastructure Options
  - Shading/Trees

- Sidewalks

### - Traffic Calming

### Next Steps

- 2-hour bicycle and pedestrian counts
- Refine recommended improvements
- Develop generalized costs of improvements
- Develop implementation strategies

DEDICATED EMPLOYEE'S, THANK
YOU FOR THE INVITATION TO
TO NIGHTS MEETING.
KEEP UP THE GOOD WORK!

#### **APPENDIX D**

#### **ONLINE SURVEY RESULTS**

#### Bicycle and Pedestrian Mobility Survey for the City of Miami Gardens

#### 1. The City of Miami Gardens is where I ..... (check all that apply)

CLive

○ Work

○ Shop

○ Play

#### 2. When you are working, shopping or playing in Miami Gardens, how do you get around?

Car	🔿 Often	Occasionally	○ Seldom	○ Never
Public Transit	🔿 Often	○ Occasionally	○ Seldom	○ Never
Walk	○ Often	○ Occasionally	○ Seldom	○ Never
Bicycle	🔿 Often	Occasionally	◯ Seldom	○ Never

#### 3. How many times per week do you take a (five or more) minute WALK in Miami Gardens?

C Less than 3 times a week

 $\bigcirc$  3 to 5 times a week

○ More than 5 times a week

#### 4. When you WALK or BIKE in Miami Gardens, primarily where do you go?

Walk	Bike
	Walk

#### 5. How many times per week do you BIKE in Miami Gardens?

- C Less than 3 times a week
- $\bigcirc$  3 to 5 times a week
- More than 5 times a week

#### 6. What areas or streets of Miami Gardens do you like to WALK or BIKE? (Specify other areas not listed in the "Comment" box below)

	Walk	Bike
Dolphin Linear Park		
Snake Creek Bike Trail		
N 191st Street		
N 207th Street		
N 199th Street (Honey Hill Drive)		
N 183rd Street (Miami Gardens Drive)		
NW 175th Street		
NW 151st Street		
NW 2nd Avenue		
NW 7th Avenue		
NW 12th Avenue		
NW 17th Avenue		
NW 22nd Avenue		
NW 27th Avenue		
NW 32nd Avenue		
NW 37th Avenue (Douglas Road)		
NW 42nd Avenue (LeJeune Road)		
NW 47th Avenue		

#### 7. Please rank the following bicycle -pedestrian infrastructure in order of importance (1=LEAST Important, 10= Most Important, use the "Comment" section for additional infrastructure):

Crosswalks	Shade	
Signage	Bike Racks on Buses	
Benches	Bicycle Racks	
Bicycle Lanes	Traffic Signals	
Restrooms	Sidewalks	
Water Fountains		

8. Do you support greater public investment in bicycle-pedestrian improvements throughout the City of Miami Gardens?

 $\bigcirc$  Yes

 $\bigcirc \mathsf{No}$ 

#### 9. What the best things about WALKING in Miami Gardens?

#### 10. What are the best things about BIKING in Miami Gardens?

#### 11. What is your gender?

○ Female

∩ Male

○ Prefer not to answer

#### 12. Which category best describes your age?

○ Younger than 20

- O 20-29
- 30-39
- 40-49
- 50-59
- 060-69
- $\bigcirc$  70 or older
- Prefer not to annswer

#### 13. What is your home zip code?
